INFORMATION

***Output 5.4 E-learning on flood and ice forecasting* is due in Period-6**, development of the course is in progress.

The project partners have agreed at the 3. project meeting in Bratislava, that Moodle (https://moodle.org/) will be used as the framework for our e-learning course, as it is a widely used, open source platform, and there are positive experiences about previous uses of it within our partnership (UL).

Therefore the course materials (*Deliverable 5.4.2 Content of the e-learning modules*) will be available on a specific Moodle site from 31ˢᵗ October 2020, and also the testing of the course will be performed through this.

Deliverable 5.4.3 Test reports of the e-learning modules will be available on our FTP server after the closure of the testing phase in Period-6.

Link and access info to the Moodle site of DAREFFORT E-learning course will be disseminated shortly.
