1. The ISTER project.

The present baseline study was prepared in the ISTER project frame, with the full title Connecting hiSTORical Danube rEGions Roman routes. This EU co-funded project started in July 2020 and addresses innovative approaches to the concept of heritage preservation, presentation, and valorisation regarding town planning and tourism development. The project is co-financed within the **Interreg Danube Transnational Programme**.

The ISTER project's overall objective is to rediscover and revive the ancient network of roads and settlements developed by the Romans, along with the Danube Region and design eco-cultural routes out of it. The project intends to use territorial-embedded Roman archaeological values to promote regional development and sustainable growth of crossed regions. The main objective leverages on the following three key pillars:

- **Multi-level Awareness:** increased recognition towards the historical evidence of the ancient network of Roman roads and settlements as a driver for eco-cultural corridors design;
- **Connectivity:** Connecting Roman material and immaterial heritage with local and regional productive sectors as proactive backbones of regional development;
- **Collaboration:** promoting shared practices in archaeology, architecture and planning, culture, traditions to create a common interpretation of Roman routes and settlements network for supporting a Roman-led cultural identity at Danube Region level.

Eventually, ISTER lays the foundation for a thematic eco-cultural route based on Roman heritage with a narrative function, by reviving ancient heritage assets for revealing the new connected Danube Region through the interference of material and immaterial Roman heritage. As such, the main objective lies in **the ancient Roman network of roads and settlements** rediscovery and revival through experimentation with contemporary planning approaches and new storytelling methods.

ISTER main result resides in a transnational framework for long-term cooperation of multi-level DR's actors as a prerequisite for promoting sustainable use of Roman heritage, specifically the network of Roman routes and settlements. ISTER proposes a substantial change in strengthening the image, visibility and identity of the newly designed eco-cultural corridor of DR's Roman routes and settlements network (mainly as pedestrian, bicycle or pilgrim route), to profile the DR as recognizable and competitive thematic touristic destination (led by the transnational territorial value of the Roman Routes heritage and itineraries). Specifically, the project will contribute to DTP result indicator by:

- **Aligning policy and regulatory framework at three levels:** policy integration (horizontally, vertically and territorially), policy design and policy communication (diffusion to a wider group of stakeholders) and increasing multi-level actors' capabilities and skills (targeting civil servants, practitioners, entrepreneurs) to support inter-institutional dialogue in the realm of Roman heritage protection and valorisation.
- **Advancing ISTER findings to local authorities and policy-makers in charge of cultural heritage,** which in return should put ISTER recommendations into regional tourism policies and territorial development plans (including the limits of Roman routes as protected areas in the urban regulatory plan of the localities), based on the GIS-based Atlas recommendations.

- Building a common and shared narrative around the former name of Danube River (Ister) and reviving the immaterial heritage of Roman routes and settlements network at DR level, resulting: 1 GIS-based territorial Atlas, 1 Interactive digital tool, 1 common branding strategy for the eco-cultural Roman Route promotion (both physically and mentally).

Specific Objectives of the project

- **Extending the current knowledge framework through a shared and documented database of the Roman network of Routes and Settlements along DR.**

ISTER aims at building a common understanding of the territorial value of the Roman Route showcasing the eco-cultural corridor as a driver for sustainable development of local communities. Therefore, a well-documented database of the Roman network of Routes and Settlements along DR will foster the cross-country cooperation and shared understanding of the current issues and territorial challenges related to the different evolution and transformation of the Roman Routes and Settlements heritage along DR. Through the shared database, the project builds a common language and framework to tackle the identified challenges across different DR countries, generating more impactful results.

- **Design new tools for enhancing physical and non-physical accessibility, visibility and valorisation of Roman routes and settlements network**

ISTER aims at increasing the (physical and non-physical) accessibility, interpretation, visibility/promotion of the Roman routes through the integration of advanced digital tools and smart technologies (i.e. GIS-based visualisation for the Atlas of Roman roads and settlements network - identifying and marking the routes with specific information boards, Interactive tool with QR-code based wayfinder application for Roman heritage in the Danube Region). Through the use of digital and contemporary tools, ISTER will increase awareness and foster the preservation of physical archaeological assets through digitalization collections, connecting them in open networks and making them more widely available to citizens and the general public in DR.

- **Building capacities of DR multi-level stakeholders and articulating the regulatory framework conditions through policy integration measures**

ISTER aims at reinforcing Roman heritage-driven regional attractiveness by following a place-based approach that brings out skills and capabilities of local actors, through a participatory approach, capturing the interest of local related-productive sectors (i.e. agriculture/ agri-food, tourism, gastronomy, arts & crafts, traditional manufacturing, festivals, etc). By interlinking Roman historical physical remnants (Routes as well as settlements, forts, watchtowers, amphitheatres) with multiple layers of “contemporary” heritage (local and regional heritage specifics of involved partners), ISTER promote a common identity based on hidden and unexplored values at Danube Region level. Furthermore, the project aims at strengthening the policy and regulatory framework conditions of sustainable use of Roman Routes heritage in Danube Region, promoting these assets as drivers for the development of cities and regions, based on the logic of policy integration and articulation in current local practices. ISTER proposes to set up a Multi-Layered Stakeholders Group in each territorial/thematic area in order to ensure the understanding of the strategies, policies and instruments importance connected to protection and valorisation of Roman heritage (specifically the network of Roman routes and settlements).

Table 1: The partnership of the project

ISTER partnership constellation consists of **17 partners from 8 DTP countries: RO, BG, RS, HU, SI, AT, DE, BiH, covering most part of the DR geographic area.** Partners were selected due to their relevant and complementary knowledge and experiences to implement project activities and deliver valuable results: Partners representing a territorial unit, be it a museum and its owned property, or public administrations, representing a wider territory on which the Roman Routes and settlements heritage resources are located: to ensure proper understanding of the ISTER messages and to guarantee the assumption of ISTER at local/ regional level: LP, PPs: 2,5-7,10,12-17. **Territorial partners** represent the investment areas where the SSI will be located - sometimes these areas fall under the ownership or management of a corresponding ASP. **Thematic knowledge providers:** representing museums, holding relevant thematic expertise in relation to heritage protection, preservation and management, as well as a wider experience in mapping physical Roman heritage assets and preparing a consistent, well-documented inventory: LP, PP6,12,14.

Transversal partners with specific competencies regarding the following domains: urban and territorial planning and development as well as policy design, to provide expertise in integrated and sustainable urban and regional development, participatory planning processes and tools (PP1,11), organisations specialised in desk-based research (PP3,4,7), a network of cities (PP11) and organisations

www.interreg-danube.eu/approved-projects/ister

Project co-funded by European Union funds (ERDF, IPA)

with specific knowledge in communication and dissemination (PP3,4). **Technical partners** with specific knowledge in ICT tools and GIS applications: to provide up-to-date technological solutions/ services for facilitating a coherent transnational approach: PP8,9. A set of ASPs well embedded in relevant transnational networks and holding similar experiences: for sharing practices and transferring knowledge purposes.

Territorial partners who represent the investment areas and areas of the Roman road are:

COUNTRY	NAME	ACRONYM

2. ISTER Terminology and definitions

Archeological heritage related definitions	
Archaeological heritage	Is a fragile and non-renewable cultural resource, consisting of evidence of all types of human manifestations throughout the history: from abandoned buildings and sites – components of the architectural structures, to all kind of objects related to human activities and all the cultural material related to them, which describe the traditions of a certain civilization ¹
Archaeological site	It covers architectural/ structural features which have been excavated or found as partially represented/ preserved elements that cannot be considered as individual, separate heritage elements (“objects”) in the wider context of the environment. ²
Archaeological object	It covers all the findings extracted from the underground or from the water, which are considered of interest for the archeological research due to their origins. ³
Cultural route	It is characterized by unique dynamics and functionality throughout the history, such as the exchange of goods, ideas, knowledge and values between people, regions or countries for long periods of time, resulting in a blending in cultures in space and time, which is visible in the present through the tangible and intangible heritage present in the area. ⁴
Cultural landscape	It might have the characteristics of the cultural route, but it’s character is also defined by the action and interaction of natural and human factors. It can be an anthropic landscape designed and created by humans (such as parks, recreational areas, plazas, etc), an organically evolved landscape (relict or fossil, traces of ancient activities, etc), or

⁴ Place – memory – meaning: preserving intangible values in monuments and sites - CULTURAL ROUTES: TANGIBLE AND INTANGIBLE DIMENSIONS OF CULTURAL HERITAGE Alberto MARTORELL CARRENO*, Pérou / Peru -- www.icomosci.org/INDEX_esp.htm

	an associative cultural landscape that is connected to spiritual/cultural/natural elements. ⁵
Tangible heritage	It consists of all the movable and immovable cultural heritage assets. In the first category are included objects such as paintings, sculptures, coins, or manuscripts, while the second consists of monuments, archaeological sites, abandoned structures and others, but also underwater cultural heritage such as shipwrecks, underwater ruins and cities ⁶
Intangible heritage	Comprises all the immaterial cultural goods considered valuable and specific for a certain geographic area/ country/nation/civilization/period. It is defined also as ‘Spiritual cultural elements’ and comprises specific practices, representations, expressions, knowledge and skills, together with the instruments, artefacts and cultural spaces that supports them. ⁷
Architectural conservation area	Can be a rural or urban area and the surrounding open spaces, which possesses a distinctive historical, archaeological, artistic, social, economic or technical value. ⁸
Archaeological fieldwork	It’s a complex process which includes a baseline research through non-destructive actions, excavations, processing and analysing the desk and onsite research findings, interpretation and publication of the results, and the distribution of the documentary/material to a long-term storage facility (museums, archives, etc). ⁹
Archaeological excavation	It is an invasive method of onsite research which involves either digging the ground, or excavating its surface, which has the aim of discovering structures or objects of an archaeological character. ¹⁰
Reconnaissance and field mapping or survey	It is a non-destructive technique which has the aim of discovering new archaeological sites/structures, provide their precise spatial coordinates, provide accurate and complex descriptions of the visible parts of the objects and identify their links with anthropogenic changes in the surrounding environment and collect surface evidence

¹⁰ JP - EU/CoE (2012), Guidelines on cultural heritage. Technical tools for heritage conservation and management, p 31

	for future studies, treatment and protection (examples: aerial archaeology, geophysical research, geo-radar research). ¹¹
Cataloguing of archaeological remains	It refers to establishing an accurate location of the monument, and also a survey of the quality of the substance which survives under the surface ¹²
Protective zone/Buffer zone	It refers at the area surrounding the perimeter of protected immovable cultural heritage that must be protected from any development/activity which may affect its integrity. ¹³
Management Plan	When applied to the management of an archaeological area, the management plan has to <i>establish and strengthen a positive interaction between protection and care, research and presentation</i> . Furthermore, the plan must assure the necessary guidelines for the use of public and private resources, in order to improve the protection and development of the archaeological areas in discussion and also to increase the public awareness of the archaeological and historical value of the individual sites. Last but not least, the Management Plan must define the proper strategies for improving the perception regarding the area and to support its future development by taking into account also the socio-economic environment and the touristic sector, through the establishment of strategic partnerships between the interested stakeholders. ¹⁴
Conservation	It is an action meant to anticipate the deterioration of a monument and to preserve it. It should be considered prior to actions which involve the substance itself. ¹⁵
Restoration	It is an action meant to preserve a structure/object and it involves bringing a structure/object to a documented former condition by getting rid of the elements added after its completion, or by reassembling the existing parts by using the original materials. It should be considered prior to actions which involve the substance itself. ¹⁶
Reconstruction	It refers at building up an existing structure by respecting its primary condition – it is different from restoration as it permits using new materials (similar with the original ones) and also different working techniques. ¹⁷

¹⁶ Mgmt plan p 58-59 (pana la reversibile inclusiv)

¹⁷ Mgmt plan p 58-59 (pana la reversibile inclusiv)

Reversible	It is a non-invasive action that includes actions which are not interfering with/influencing the original fabric and which are applied in such manner that can be later removed without harming the original structures/objects.
Planning and governance framework definitions	
Evidence-based planning	Is an approach meant for supporting policy makers and urban planners in making well-informed decisions based on real and updated information from a certain area/field of interest. It guides planners in choosing the best strategic decisions when it comes to spatial development, <i>by putting the best available evidence from research at the heart of policy development and implementation</i> ¹⁸
Capacity building	“Specifically, capacity building encompasses the country’s human, scientific, technological, organizational, institutional and resource capabilities. A fundamental goal of capacity building is to enhance the ability to evaluate and address the crucial questions related to policy choices and modes of implementation among development options, based on an understanding of environment potentials and limits and of needs perceived by the people of the country concerned” (UNCED, 1992) ¹⁹
Policy and regulatory framework	It encompasses all the official laws, regulations, decrees and policies developed and approved by the government, which aim at setting the main conditions of existence/development in a certain field of action. ²⁰
Stakeholder	It is a person that has an interest or concern in something, and that affects or can be affected by a certain action/project developed by a third party. ²¹
Policy	It is a method of action chosen from multiple alternatives for its adequacy in a certain context, meant to guide and determine present and future decisions ²² , by embodying also a set of pre-set strategic objectives.
Governance	<i>the act or process of governing or overseeing the control and direction of something (such as a country or an organization)</i> ²³

3. The Baseline screening

A baseline assessment is a study conducted at the beginning of a project or a programme to analyze the current situation. It gives a picture of the situation before the inception of the programme/project, and results can then be compared with a follow-up assessment towards the end of the programme, in order to understand the effects that the programme has had on the target group.

The current document – designated as «State-of-the-art» – was produced by the Lead partner, work package leader T1 and in close cooperation with the Partners to provide a starting point where partners can build their foundations for future development phases of the project. The main goal is to give key actors an understanding of the state of play in other cities areas and know better the situation and local challenges of each of the participating cities. It provides a starting point of the network and what challenges should be addressed by the network.

Cultural heritage is a shared resource and a common good. Like other such goods, it can be vulnerable to over-exploitation and under-funding, which can result in neglect, decay and, in some cases, oblivion. Looking after our heritage is, therefore, our common responsibility. While heritage protection is primarily a matter for national, regional and local authorities, the European Union has a role to play in line with the EU Treaties and in respect of the principle of subsidiarity. (EC COM(2014) 477).

It has recognized economic benefits and the impact of cultural heritage as an economic factor capable of creating jobs, catalyse technical innovation, and a useful tool for regional development. We have also highlighted the social benefits that promote sustainability and provide social cohesion and improve the quality of life of citizens.

Why the ISTER project

ISTER project firstly addresses the challenge of **Roman heritage** discontinuity, which reflects both in a territorial dimension related to a low level of investment and connection between heritage resources and local/ regional productive sectors, as well as in visualisation and attractiveness dimensions regarding the promotion and awareness-raising on the importance of heritage resources as drivers for regional development (economic development).

When thinking on economic development in cities, cultural heritage (as Roman heritage) always plays an important role in any city strategy, particularly in historical towns where cultural heritage's valorisation remains one of the best tools to promote social and economic development. However,

²⁴(20) (PDF) Why Multi-Stakeholder Groups Succeed and Fail. Available from: https://www.researchgate.net/publication/228304164_Why_Multi-Stakeholder_Groups_Succeed_and_Fail [accessed Nov 16 2020].

several factors such as lack of funding, lack of management expertise, etc, are preventing these cities to fully exploit its potential, limiting the capacity to valorise these important assets.

Stepping further the isolated/ detached Roman settlements heritage, ISTER tackles the territorial dimension of the **Roman Routes**, as a contiguous transnational element that passes DR states' borders and provides a relevant scale for exchange and joint development. Therefore, ISTER's main objective focuses on rediscovering and revitalizing the ancient **Roman Roads Network along** the DR as a key driver in promoting territorial development based on sustainable use of cultural and natural heritage (specifically, Roman routes). ISTER promotes this Roman roads and settlements network as a catalyst for touristic development, as well as an opportunity for territorial competitiveness and sustainable growth of Danube crossed-regions.

Cities are facing, in a context of crisis and institutional reorganization of local government, different challenges linked to the revitalization of cultural heritage through innovative actions, which are able to provide operational tools and tracking systems, encourage alliances between stakeholders, promote employment and entrepreneurship in the creative sectors, experiment with innovative public procurement initiatives and attract new funding and governance models.

Key facts

Argument for why the partnership deals with tangible and intangible heritage with a focus on Roman heritage and settlements connected through the Roman Routes:

➤ **Power of tangible and intangible heritage for local economic development**

In addition to preserving and creating cultural value, preservation/valorization of Roman Heritage contribute to local economic development through job creation and revenue generation related to the visitor economy. More long-term benefits can arise from partnerships between museums, local entrepreneurs, businesses and higher education and research institutions that support the dissemination of new technologies and the creation of new products. Potential impacts include:

- New jobs and revenues through increased local attractiveness for tourists, talent and firms.
- Dissemination of new technologies, the creation of new goods and services and support for creativity.

To increase impact partnership can:

- *Integrate cultural heritage/museums/parks in the local tourism development strategy.*
- *Link cultural heritage and the business community to develop new goods and services.*
- *Cooperation with the hospitality industry and local cultural institutions to reach out to diverse audiences and attract new visitors*
- *Engaging with firms as well as research and education institutions to promote innovation.*

Urban development and efforts to improve the accessibility of museums, parks, (e.g. transport, urban signage, and parking lots) can reinforce these economic impacts. Local governments can also increase the visibility of cultural heritage locally and internationally. With respect to tourism, local governments could foster cooperation with local tourist offices, lodging, food and beverage and transportation

services. Local government could also coordinate all local cultural institutions so as to offer an integrated supply that is more attractive to diverse audiences. Local governments could help pool some of the costs, mainly those related to backoffice activity. Collaboration with other museums may also prove to be an important step.

➤ **Integrate Roman routes and settlements in the local tourism development strategy**

The promotion of cultural heritage on the international tourism market requires knowledge, investment and capacity that is often too expensive for museums to manage themselves. Local governments can help by involving museums in national and international fairs and networks. Local governments can also facilitate coordination between the activities of museums and other cultural institutions to create an attractive offer.

To increase impact partnership can:

- Promote cultural heritage of Roman routes and settlements locally, nationally and internationally by funding information and advertising support and by organising the participation of museums in international fairs.
- Promote coordination between tourist offices, hotels, restaurants and museums to offer an integrated supply of services.
- Promote sustainable tourism principles, by, for example, making tourism accessible to all (e.g. low-income groups, people with mobility difficulties).
- Support partnerships with universities, science parks and researchers.
- Help museums to make their collections better known to local producers (including agricultural), artisans, craftsmen, designers, SMEs and entrepreneurs.

➤ **Build on the role of preservation/valorization of Roman Heritage for urban regeneration and community development**

Museums, archeological parks, exhibition spaces of cultural heritage are places that contribute to both the physical and social design of many cities. Their renovation or construction can stimulate urban regeneration and bring new life into areas losing their social dynamism and traditional economic base. This place can appear to be places where social capital can be built between people of different communities when many traditional meeting places are disappearing. Potential outcomes could be:

- International branding and increased territorial attractiveness.
- Economic diversification, new jobs and revenues through the development of cultural and creative quarters.
- Better quality of life.
- Higher level of social capital.

Element of the contribution of example: museums, archeological parks, exhibition spaces of cultural heritage to local development is their impact on urban regeneration, the emergence of vibrant cultural and creative quarters and the creation of new bridges between and within communities. The cultural force of the city and its built environment plays a significant role in shaping people's sense of identity. In this context, museums are not just places where collections are exhibited. They symbolise shared heritage and identity as well as a sense of the past, present and future around which a community is organised. The relative permanence of buildings and land, means they are not only sources of memory and reflection but also of contest over the control and meaning of space itself.

Museums can therefore be considered a kind of public art serving many goals: animating public debates, creating connections and giving meaning to new places.

➤ **Catalyse culturally aware and creative societies**

Museums have mainly been created to increase cultural awareness and education. With time, this objective has become more complex to encompass training and life-long learning, not only for native-born populations but also for immigrants and other marginalised communities. A museum's mission is to promote reflection and self-awareness by providing audiences opportunities to learn more about their environment and themselves through museum collections. They can change the way people think about many past and contemporary issues and can challenge misperceptions and rigid modes of thinking. By displaying an inventory of past creativity, museums help promote an understanding of why and how things have been created. In that very sense, they may promote a broader culture of creativity.

Potential outcomes include:

- Knowledge development and upskilling.
- Increased levels of self-confidence.
- More culturally aware and open communities.
- Diffusion of creativity

To increase impact, partnership can:

- Recognise the role of cultural heritage in education and training of young people as well as adults.
- Work with museums to build resources and capacities to take a broader approach to the visitor experience.
- Support a balance between meeting the needs of local audiences and tourists.

The relationship between local government and museums for education is generally very well recognised and is now being extended to include adult training and life-long learning. It is very important for local government to acknowledge that the collections and archives of museums constitute useful resources for these purposes.

Cultural heritage is readily included in numerous public (e.g., local, regional and national level) development strategies as a significant asset in contemporary sustainable development. This is a great opportunity for many territorial units and a significant chance for implementing diverse projects linked with conservation, restoration and adaptation of heritage sites or preservation and presentation of immaterial heritage.

4. The challenge

The challenge of cities/museums (in the Danube Region but also elsewhere) within preservation/valorization or Roman heritage (specifically Roman Routes network).

If it is not connected with social values, economic activity, and international connections, and if it is not appropriately managed, cultural heritage hardly constitutes an advantage for an area's development. **In contrast, when the management systematically combines the key factors,**

www.interreg-danube.eu/approved-projects/ister

Project co-funded by European Union funds (ERDF, IPA)

preservation/valorization of cultural heritage can represent an important (economic, social, environmental, etc.) development potential.

What is sustainability? In more general terms, sustainability is the endurance of systems and processes. Sustainable development is the organizing principle for sustainability which includes three interconnected domains: ecology, economics and social, see Figure 1. Sustainability could be defined as the ability or capacity of something to be maintained or to sustain itself, sustain-ability. Therefore, it's about how people need to live now without jeopardising the potential for people in the future to meet their needs. A sustainable activity should be able to continue for the foreseeable future (Kazmerski, L. (2016). Lecture Strömstads Academy, academic festival. Strömstad, Sweden.)

Picture 1: Sustainable development illustrated with three domains. (Kazmerski 2016)

Economic Development challenge

Economic effects of cultural heritage conservation include new jobs and a resulting source of household income, heritage tourism, and the establishment of small enterprises. The local population participates in heritage conservation by providing their skills, in which it must receive training for carrying out specific jobs (e.g., for renovating cultural heritage and performing restoration work), and the use of raw materials from the local environment is common. **The inclusion of local residents contributes to generating income, and often heritage can also lead to the revitalization of the area.**

According to Du Cross (2001, 167), there is two-way relationship between the key elements of cultural heritage place and its tourism potential: its **cultural integrity or robusticity on the one hand, and commercial factors connected with transforming a historical site into a cultural tourism site on the**

other. The main goal of planning for sustainable cultural heritage tourism is to identify cultural heritage sites (Example: roman routes) and their potentials for tourism development, and to manage them to ensure sustainability, through **whichn tourism can also contribute to heritage conservation.**

Museums generate revenues from exhibitions and also through branding and merchandising activities. In most cases, museum activities foster links with other players in creative industries as well as other sectors in the rest of the economy. Indeed, many economic impact assessment studies demonstrate that museums contribute to job creation, generate GDP, and bring substantial tax revenues for their communities.

Finally, in the age of the knowledge economy, museums can encourage local economic development by supporting creative economic activities such as design and innovation. Such activities can benefit local and international enterprises and entrepreneurs. For local governments, museums become not only one of many actors in local development, but a driver of change.

The cooperation of local community representatives, conservationists, tourism operators, property owners, policymakers, those preparing national development plans, and site managers **is necessary in order to achieve a sustainable tourism industry and enhance the protection of heritage resources for future generations** (International Cultural Tourism Charter 1999; Goluža & Erhartič 2014).

In terms of economic and social development of a region, cultural heritage is no longer considered as a financial burden and only a “moral obligation” of the society, but it is rather seen as **a possible driving force for regional development and economic growth**, providing opportunities for innovations, entrepreneurship and sustainable development. Tourism, as one of the main sectors of economic and regional development, is increasingly using cultural and natural heritage as its key factors for attractiveness of a destination; many tourists choose their travel destination because of the heritage it offers. According to the report of the European Council from 2014, 27% of EU travellers indicate that cultural heritage is a key factor in choosing a travel destination. In 2013, 52% of EU citizens visited at least one historical monument or site and 37% a museum or gallery in their respective countries, while 19% visited a historical monument or site in another EU country. (European Commission, Towards an integrated approach to cultural heritage for Europe, COM(2014).

Thus, **cultural heritage plays a significant role in a tourism industry, creating jobs and strongly contributing to the development of cities and regions.** Particularly regional economies which are facing difficult times can strongly benefit from their cultural heritage as a contributor to regional development, creating new jobs and attracting visitors, thus contributing to both economic and social aspects of their development.

Social Development challenge

Cultural heritage enhances the identity of a place and is therefore even more important during the time of globalization. The historical value and identity play a much greater role in its conservation than the physical renovation of structures because the local tourism stakeholders, the production of publications, and the organization of activities (e.g., exhibitions, fairs, and musical events) connected with cultural heritage help promote the place (Cultural Heritage ... 2007). In the time of globalization, stronger local identity is an advantage to society. In this context, the following thought is very informative: “If we all are to build a good global village, we need first to know well the village we are coming from” (Sarbib 2000, cited in Cultural Heritage ... 2001). It emphasizes the importance of an individual’s identity that is shaped in a family environment or home town.

Museums also play a crucial role in addressing contemporary societal issues. They tackle diverse and challenging areas such as globalisation, migration, polarisation, inequality, populism, gender equality, ageing societies, decolonisation and climate change. They are platforms where restorative justice, intercultural and intergenerational dialogue, and cultural diplomacy principles can be applied.

Among the social development potentials of cultural heritage, its educational role is also important. For example, using old skills can significantly contribute to raising the awareness of sustainable living in a specific region, and understanding past achievements, especially technical achievements that have been preserved as can stimulate the development of new expertise.

Environmental Development challenge

Environmental development potential mainly refers to traditional practices (intangible heritage) connected with the cultural landscape (immovable heritage), such as (1) the conservation of ecosystems (e.g., mowing daffodil meadows), (2) maintaining the complexity and stability of ecosystems (e.g., sustainable management that contributes to the conservation of cultural landscapes), (3) supporting local organic food production (e.g., markets with locally produced food, social entrepreneurship in the countryside), (4) erosion prevention (e.g., sustainable forest management), and so on (Ledinek Lozej, Šmid Hribar, & Bole 2012).

Environmental aspects are important also in urban cultural heritage sites, where proper environmental infrastructure is of crucial importance for the maintenance of buildings and the provision of basic infrastructure for living.

Therefore, implementation of environmental planning solutions to cultural heritage sites could foster urban renewal that makes protected buildings suitable for contemporary living standards.

Last but not least, cultural heritage can have a significant role in sustainable development, by using a sustainable approach in the regeneration of heritage sites and energy-efficient re-adaptation of heritage buildings, promoting sustainable tourism, bringing culture and environment together, contributing to the sustainable development of cities and regions all over Europe and worldwide. A key challenge of preserving the Roman heritage with a focus on land use and space issues

Roman heritage sites face many challenges today in the era of accelerating globalization like **uncontrolled urban development (urban sprawl)** due to demographic growth of the cities as well as **environmental problems** like fluctuation of river courses leading to frequent floods. The roman sites are located outside or inside the localities, some Roman fortifications being today 90% covered by the construction of the modern city, by constructing new roads or affected by intensive agricultural works and deforestations. However, there are also sites without traces of late interventions, restored or under restoration, or pastures. Through urbanization, people tend to ignore their history and traditions seeking adequate services and a better lifestyle leading to the disappearance of existing urban fabric that creates an undefined urban pattern.

These major challenges identified as hindrance to effective preservation of cultural heritage are caused by poor physical planning and protection mechanisms, inadequate development control and enforcement, and an ineffective preservation city policy. Regarding these issues, a number of principles and recommendations tackled in the **Venice Charter** (1964) can improve the preservation and sustainable development of roman heritage:

*(1) The implementation of **effective planning and legislative tools, policies, strategies and practices** to sustainably manage settings requires **consistency and continuity** in application, whilst reflecting the local or cultural context in which they function. Tools to manage settings include specific legislative measures, professional training, development of comprehensive conservation and management plans or systems and use of adequate heritage impact assessment methods.*

*(2) **Legislation, regulation and guidelines** for the protection, conservation and management of heritage structures, sites and areas should provide for the establishment of a protection or **buffer zone** around them that reflects and conserve the significance and distinctive character of their setting.*

The **buffer zone** represents a zone intended to protect the sites from negative influences like urban development pressure. The importance of the environment for the object must be properly recognized to be able to define a suitable perimeter as well as required protective measures for the buffer zone. In controlling the transition between the heightened protection of the roman Heritage site and the surrounding territories, a buffer zone may set limits to protect views, settings, land uses, and other aspects, but may also positively encourage developments that would be beneficial to the site and community.

*(3) Planning instruments should include **provisions to effectively control the impact** of incremental or rapid change on settings. Significant skylines, sight lines and adequate distance between any new public or private development and heritage structures, sites and area are key aspects to assess in the prevention of inappropriate visual and spatial encroachments or land use in significant settings.*

*(4) **Heritage impact assessments** should be required for all new development impacting on the significance of heritage structures, sites and areas and on their settings. Development within the setting of heritage structures, sites and areas should positively interpret and contribute to its significance and distinctive character.*

5. The most important “ingredients” of preservation of heritage

Defining heritage preservation

The best definition of heritage preservation (or conservation) is given by the International Council of Monuments and Sites (ICOMOS), a global non-governmental organization that brings together a network of experts which join their efforts for protecting the cultural heritage around the world. ICOMOS provides a complex definition, subsequently taken in various forms in other official documents, which explains the concept as ‘all the efforts designed to understand cultural heritage, know its history and meaning, ensure its material safeguard and, as required, its presentation, restoration and enhancement’, while also ensuring its accessibility to present and future generations’. ²⁵ ICOMOS also emphasizes on the importance of maintaining the cultural significance and value of a place/object through conservation by considering equally important all of the main components of preservation: study, protection, development, administration, maintenance and interpretation of Cultural Heritage assets.

In order to maintain and valorize the cultural significance of a place, autor x²⁶ explains that is important to achieve a proper understanding of this significance, and proposes a set of steps to be followed in this regard:

- First of all, assessing to what extent the heritage value of a certain place is vulnerable to change;
- Secondly, to act properly and impose the necessary constraints in order to maintain and reinforce the value;
- Assure a balance between conservation measures, when conflicts occur between different conservation actions;
- Put the authenticity of the place at the core of all actions, and get rid of the elements which are not reflecting and embodying the heritage value of an area/object (and vice versa).

Heritage preservation is also a process which requires a complex management of changes to a valuable place/object: while balancing between maintaining its cultural significance and value, it should also focus on embracing occasions for revealing and adapting it to multiple socio-economic, cultural and physical changes, and also to keep it alive and present in people’s lives. According to the **Venice Charter**²⁷, heritage preservation should be facilitated by making it useful for social purposes, without affecting the physical state, but focusing instead on changes in function. The same vision is shared by the **World Heritage Convention**, which launches a call for all natural and cultural heritage resources to seek for a function in the community, while also militating for the fact that countries should have dedicated policies for integrating the CH in people’s lives ²⁸. In this regard, heritage preservation is also about ‘recognizing the potential for beneficial change to significant places, to reveal and reinforce value’. In this context, beneficial changes refer to those which enhance and

²⁶ Conservation principles. Policies and guidance for the sustainable management of the historic environment, p 15

²⁷ Venice Charter, art. 5, p 4

²⁸ Convention concerning the protection of the world cultural and natural heritage

bring added value to a place, while also generating the need to preserve the existing value, thus fulfilling the aspirations of each generation to enrich the historic environment.

Contemporary understandings of cultural heritage preservation

Starting with the second half of the 20th century, the understanding of heritage preservation has extended from an activity focused on singular monuments, to preserving wider contexts, which enlarged also the expertise required for proper intervention, thus enhancing the multi-disciplinary approach in the field²⁹. The so-called approach Integrated Conservation was first defined in the Amsterdam Declaration on the European Architectural Heritage (1975), and it remained a key concept in the following official documents concerning the Cultural Heritage, such as Granada Convention (1985), Valetta Convention (1992) and Florence Convention (2000). Thus, Integrated Conservation leverages on interdisciplinarity as a fundamental approach in both onsite and normative initiatives, and is focused on building networks of experts from various fields related to Cultural Heritage, as well as on applying and further developing practical tools for enhancing the interdisciplinary communication.³⁰

Furthermore, Integrated Conservation is taking into account a set of challenges posed by wider contexts, which are closely linked to three main components:

- the social component, focusing on the relationship between the heritage and societies, and seeing cultural heritage as an asset for promoting diversity, empowering heritage communities and participatory governance.
- the economic and territorial development component, focusing on the relationship between CH and spatial development, as well as local economy, aiming at strengthening the contribution of CH to sustainable development based on local resources, tourism and employment.
- the knowledge and education component, focusing on the relationship between heritage and shared knowledge, including research, awareness raising and training.³¹

Key “ingredients” of heritage preservation

Heritage preservation is a complex process, and its complexity is given on one hand by the particularities of heritage assets, and on the other by the peculiarity of the socio-economic and spatial contexts they are part of. The **ICOMOS Charter for the analysis, conservation and structural restoration of Architectural Heritage** proposes an interesting comparison between heritage preservation and medicine³², as both fields require a special attention to the research of the subject and of the wider context, a very carefully chosen diagnosis and remedial measures, followed by meticulous interventions and a close monitoring of the ‘subject’s’ evolution – associated in medicine with anamnesis, diagnosis, therapy and controls. An additional step for a successful preservation process is given by the Venice Charter (art. 2), which highlights the need for bringing together

²⁹ ICOMOS Charter – Principles for the analysis, conservation and structural restoration of architectural heritage (2003)

³⁰ Guidelines on cultural heritage – technical tools for heritage conservation and management/61

³¹ An integrated approach to cultural heritage (The Council of Europe’s Technical Co-operation and Consultancy Programme)

³² ICOMOS CHARTER- PRINCIPLES FOR THE ANALYSIS, CONSERVATION AND STRUCTURAL RESTORATION OF ARCHITECTURAL HERITAGE (2003)

essential inputs from all sciences and techniques which can bring added value to the study and protection of Cultural Heritage.

Apart from the 'technical methodology' to be taken into consideration in a successful preservation process, an additional set of Conservation principles was provided by Historic England, principles which launch a call to a shift in the mindset regarding heritage protection:

1. *The historic environment is a shared resource* – the cultural heritage represents a particular and dynamic collection of human activity evidence throughout history, reflecting the existence and overlapping of various traditions, beliefs and knowledge; thus, the historic environment brings value, identity and purpose to the world we live in, and should be considered a precious socio-cultural and economic asset, which should be further shaped and sustained by people, in order to perpetuate the organic evolution which shaped our current heritage.
2. *Everyone should be able to participate in sustaining the historic environment* – people should learn about cultural heritage, in order to become aware of its value and its importance for present and future generations, and should also be involved in the decision-making process, as they are the end users of the cultural assets. Thus, knowledge providers (such as museums, researchers, municipalities) have a crucial role in providing access to knowledge, in encouraging people to participate and in helping them defining the value to be attached to places.
3. *Understanding the significance of places is vital* – in this regard, it is important that all the actors involved in the preservation process have a good understanding of the past and present processes and interactions that contributed to the current condition, value and significance of a certain area/object. Thus, it is important to start this process by providing answers to questions such as: who values this place and for what reason? How does this value relate to the physical assets? What makes a place valuable in comparison with other places with similar characteristics? By answering these questions, one can take informed decisions regarding the further protection and valorisation of the cultural heritage assets.
4. *Significant places should be managed to sustain their values* – the works on the cultural heritage should overcome natural and anthropic disasters, but in the same time should respect and reinforce the heritage values of a certain area, thus assuring that the benefits outweigh the harms. Furthermore, the interventions should assure that the places will be valued in the present, but also in the future by the next generations.
5. *Decisions about change must be reasonable, transparent and consistent* – decisions about change should be made by making use of public policies and a continuous process of stakeholder engagement, that should lead to informed and justified decisions and should also minimize the conflicts between several actors interested in a certain area. Decisions should be taken by seeking for the less harmful choices for the cultural heritage assets, while also pleasing the interested parties. Yes, one must keep in mind to make the best decisions in order to have a minimum impact on the significance and value of a certain area after solving the conflicts between stakeholders.
6. *Documenting and learning from decisions is essential* – it is very important to have a clear evidence of the decisions taken in the past and the rationale behind them, in order to have a good understanding of how the significance and value of a place has been altered (if the case) and to take informed decisions in the future.

Cultural (roman) routes in the context of heritage preservation

A particular component of the cultural heritage, the Cultural Routes (CR) represent ‘irreplaceable narrative keys’ that have the role of creating synergies between people and natural and cultural heritage assets. Cultural routes are also enriching the contributions of peoples to future generations by representing a proof of core values such as solidarity, sharing, tolerance, multicultural integration and peace. As the Council of Europe also emphasises, the Cultural Routes are meaningful not only because of their inner value, but also due to their capacity to enhance intercultural dialogues and cooperation, representing a proof of reciprocal cultural influences. In what concerns their socio-economic, cultural and territorial impact, CR can enhance the sustainable development of their surrounding territories, contributing to the conservation policies related to the territory, but it also contributes to the cultural integrity of the surroundings and the harmonization of initiatives for a certain area.³³In what concerns the preservation of the Cultural Routes, the ICOMOS Charter on Cultural Routes provides a clear and comprehensive methodology for developing suitable Strategic Plans for CR conservation. According to ICOMOS, the process starts with a clear understanding of the CR significance, a basic principle associated with the CR management which allows for a good cross-coordination between activities (research, protection, dissemination, cooperation) and between instruments (such as policies for protection, sustainable development and use, tourism, etc). A second step would be the identification of route as a whole and on separate sections (sometimes spread over multiple geographical territories), together with the identification of the complementary assets which comprise it. Considering the fact that usually the route extends national boundaries, national research teams should be set in key points along the route. After the desk and onsite research follows the development of a Strategic Plan for Conservation, comprising measures, tools and legal instruments for the protection, use, management and promotion of the Cultural Route. Special attention should be given to measures and tools for raising the awareness and interest of both public and private bodies. Furthermore, the Strategic Plan should propose new instruments for assessment (of the integrity and authenticity of the CR as a whole or its components), protection and evaluation and risks management. Protection and promotion of Cultural Routes should also include the tourism infrastructure, as CR could have a great impact on the socio-economic and territorial development of a certain area, thus contributing to the tourism sector. Thereby, the strategic plans for conservation should take it into consideration and make sure that it provides sufficient measures and rules for assuring a sustainable and beneficial interaction with the touristic sector, without affecting the meaning and integrity of the existing historical values. Last but not least, a key step for assuring the coherence of the whole process is to obtain funding in key stages, in order to allow a balanced and coordinated progress of the research, preservation and use of the Cultural Routes.

The Roman Routes represent an asset with an outstanding cultural value, as they are a proof of the most impressive empire history have known, fact highlighted also by the fragments of roads and settlements present all around Europe and in other parts of the globe. Yet, little attention was dedicated to the links and stories which can be revived by bringing together the separate fragments which could act as connectors of punctual spots holding a rich history, and could form Cultural Routes around Europe and beyond. ISTER project states that capitalising Roman Routes means both investing in singular landmarks, but also in making the Route accessible and attractive for residents and tourists, while assuring its preservation. The project follows the ‘key ingredients’ for cultural routes

³³ Cultural Routes between East and West: a network for cooperation between Mediterranean cities

preservation and proposes an integrated approach which aims to tackle the territorial fragmentation and discontinuity of Roman Routes across Danube Region, the low level of visibility and accessibility (physical and non-physical) and the lack of integration into the local/regional development context, by developing new tools for integrating the Roman Routes into wider tourist routes and within the local productive sector.

6. Key issues- to build upon already existing inventories and seeking for capitalisation opportunities

EU strategies

The main European strategy concerning cultural heritage is the so-called *Recommendation of the Committee of Ministers to member States on the European Cultural Heritage Strategy for the 21st century* or short “Strategy 21” (1) that was adopted in 2017. It tackles the topics of protecting and promoting cultural heritage in general and not specifically archaeological heritage or even more precisely archaeological parks. It does, however, give some general recommendations in use and management of cultural heritage. Strategy 21 has three main components that are linked to a series of challenges (strategic goals) and recommendations on how to address the challenges and achieve the goals. For the analysis of strategic challenges, a special analysis tool was used – SWOT analysis – a tool that inspects internal strengths and weaknesses and external opportunities and threats of the studied entities and helps to establish the direction and scope of the strategy.

Strategy 21 recommends an inclusive approach when dealing with cultural heritage – all stakeholders, from government institutions, local authorities and tourism workers to NGOs, volunteers and civil society. It encourages protection and promotion of heritage, mobility of professionals, promotion of modern (digital), and traditional skills needed in the cultural sector and aims to reinforce national and international cooperation on cultural heritage. In regards to archaeological heritage or archaeological parks specifically, Strategy 21 does not give any direct recommendations, except to follow the accepted conventions and agendas when making strategies.

Following the year 2018, the European Year of Cultural Heritage, the European Commission proposed a *European Framework for Action on cultural heritage*. The document aims to build-up the momentum of the very successful European Year of Cultural Heritage and further reinforce the connection to our common heritage. It proposes around 60 actions that are divided in 5 main themes:

- Cultural heritage for an inclusive Europe: participation and access for all
- Cultural heritage for a sustainable Europe: smart solutions for a cohesive and sustainable future.
- Cultural heritage for a resilient Europe: safeguarding endangered heritage
- Cultural heritage for an innovative Europe: mobilising knowledge and research
- Cultural heritage for stronger global partnerships: reinforcing international cooperation

Its agenda is therefore very similar to Strategy 21’s methodology and also similarly broad – it does not stress specifically strategies concerning archaeological heritage or archaeological parks.

Equally broad is the *New European Agenda for Culture (2)*, adopted in 2018 and defining cultural heritage policies' priorities in the years 2019 – 2024. It focuses, similarly as the above-mentioned strategies, on social, economic and external dimensions. It does not reference archaeological heritage or archaeological parks specifically.

International conventions

The Convention Concerning the Protection of the World Cultural and Natural Heritage (1972) is the mother of all heritage protection conventions in terms of ethical meaning, linking outstanding heritage properties to the whole humanity, but also in terms of modernity, because of its holistic view of heritage encompassing cultural heritage and nature, cultural landscapes and mixed properties. The “World Heritage Convention” was edited in 1972 by the United Nations Educational, Scientific and Cultural Organization (UNESCO) and was signed by 194 countries all over the world. All the countries included in the ISTER project signed the “World Heritage Convention”; between the first signing countries are Bulgaria and former Yugoslavia in 1974. Between the pilot areas of the ISTER project only the LIMES-border-roadlike (Regionalverband Ostwürttemberg) are also a UNESCO site, and the Alba Iulia Fortress is on the Romanian UNESCO Tentative Lists. Principles and aspects of the “World Heritage Convention” are nevertheless important also for the other sites. Beside the preservation of properties with outstanding universal value, the convention requires from state parties to protect the cultural and natural heritage within regional planning programmes and to foresee staff and services at their sites, to undertake scientific and technical conservation research and adopt measures, which give this heritage a function in the day-to-day life of the community.

Another document directly related to the “**World Heritage Convention**” and concerning also essential aspects of the ISTER project is the Vienna Memorandum on “World Heritage and Contemporary Architecture – Managing the Historic Urban Landscape”, dated to 2005. The memorandum refers to historic cities already inscribed or proposed for inscription on the UNESCO World Heritage List and larger cities that have World Heritage monuments and sites within their urban territories. The future of historic urban landscape calls for mutual understanding between policy makers, urban planners, city developers, architects, conservationists, property owners, investors and concerned citizens, working together to preserve the urban heritage while considering the modernization and development of society in a culturally and historic sensitive manner, strengthening identity and social cohesion. The historic urban landscape refers to ensembles of any group of buildings, structures and open spaces, in their natural and ecological context, including archaeological and palaeontological sites, constituting human settlements in an urban environment over a relevant period of time, the cohesion and value of which are recognized from the archaeological, architectural, prehistoric, historic, scientific, aesthetic, socio-cultural or ecological point of view. This landscape has shaped modern society and has great value for our understanding of how we live today. The historic urban landscape is embedded with current and past social expressions and developments that are place-based. It is composed of character-defining elements that include land uses and patterns, spatial organization, visual relationships, topography and soils, vegetation, and all elements of the technical infrastructure, including small-scale objects and details of construction.

National laws

SLOVENIA

The main law in the concerning field in Slovenia is the **Cultural Heritage Protection Act from 2008** with subsequent changes (1). In Article 3 we can find precise **definitions** related to:

"2. "archaeological finds" are moveable archaeological remains, which had been under the ground or under water at least 100 years. Archaeological finds are also weapons, ammunition and other military equipment, military vehicles and vessels, or parts thereof, that were under ground or under water for at least 50 years;

3. "archaeological remains" are all things, and any traces of human activity from previous periods on the surface, in the soil and water, the conservation and the study of which contribute to discovering the historical development of mankind and its relation with the natural environment, for which the main source of information are archaeological research or discovery and for which it can be assumed that they were under ground or under water for at least 100 years and that they have characteristics of heritage. Archaeological remains are also things related to cemeteries, as defined under the regulations on war graves, and to war, together with the archaeological and natural context, which were under ground or under water for at least 50 years. Professionally identified and registered archaeological remains become heritage;

4. "archaeological site" is the original place of deposition and discovery of archaeological remains. Professionally identified and registered archaeological sites become heritage (hereinafter: registered archaeological sites).«

However, there is no official definition for archaeological parks.

The **establishment of protection** is defined in Articles 12-13: the Institute for the Protection of Cultural Heritage of Slovenia »shall draw up a proposal for the proclamation of a monument at its own discretion or upon some other initiative. If the Institute rejects the initiative for proclamation, it must notify the petitioner of its decision and the reasons for it. The Institute must notify the owners of the heritage to be proclaimed a monument of the drawing up of a proclamation proposal, and must provide them with the opportunity to express their opinion thereon.

Protection is established through different procedures and with different gradations:

- a) registered cultural heritage is acknowledged by the entry in the Register of immovable cultural heritage,
- b) monuments of local importance are acknowledged by proclamation act of the municipality,
- c) monuments of national importance are acknowledged by proclamation act of the government.

As per Article 29 conservation plans need to be prepared in special circumstances of renovation of a monument. Mandatory contents of the conservation plan are defined by the concerning Rules on Conservation Plans.

In accordance with Article 28, 29 and 31 permissions must be obtained from the Institute for the Protection of Cultural Heritage of Slovenia for: interventions on a monument; interventions in the area

of influence (buffer zone) of the monument, if this obligation is determined by the act of proclamation of the monument; interventions within protected heritage areas; interventions within registered immovable heritage or within the spatial planning unit, if this obligation is determined by a spatial act; for the research on a monument, which is not an archaeological remains. Prior to the issuance of the permission, conditions of the Institute for the Protection of Cultural Heritage of Slovenia must be obtained, whereby the applicant must provide appropriate documentation. To carry out research into archaeological remains and to remove heritage a special permission has to be required from the Ministry for Culture.

All movable archaeological finds from the earth surface, from soil or water in the territory of the Republic of Slovenia are owned by the State (Article 6). Conditions for use, compensations, provision of accessibility and managers are explained in Articles 36, 38, 39, 54 and 59. Heritage should be handled in such a way as to ensure the highest possible conservation of its cultural values and social significance for the future. Therefore each owner must act with a monument as a "good master", protecting the monument in proportion to his abilities. The owner of the monument is entitled to compensation if the conditions for the economic exploitation of the monument are worsed due to the protection regime.

For certain monuments, the proclamation act determines the obligation of public accessibility of the monument (Article 13). But, according to Article 54, monuments must be accessible to the public in proportion to the capacities of the owner.

GERMANY

In Germany there are no "regions", but federal states where legal policies in matters of protection of cultural heritage in general and Roman archeological heritage in particular take place. Therefore "regional" must be understood as "state level of policy".

Due to the federal structure the responsibility for culture and cultural heritage is not on national but on regional level, which means that respective laws are developed and executed on the level of 16 Bundesländer or federated states. There is only one law available which has binding authority to all federated states, that is the **Act on the Protection of Cultural Property (Kulturgutschutzgesetz des Bundes) from 2016**, related to movable cultural property. The law focuses on import regulations, duties of care, return mechanisms, nationally valuable cultural property, national cultural property and export regulations. The law defines the conditions for interventions in cases of import, duties of care, return mechanisms, nationally valuable cultural property, national cultural property and export regulations. The law also defines archaeological artefacts, the ownership and the responsible authorities.

ROMANIA

The Government Ordinance 43/2000 on the protection of the archaeological heritage and the declaration of archaeological sites as areas of national interest and the Law 422/2001 on the protection of historical monuments are the principles legislative acts in Romania affecting issues concerning ISTER project.

An archaeological site is declared an area of national interest means the area of priority archaeological interest established on the territory comprising archaeological sites whose scientific research, protection and enhancement are of exceptional importance for national history and culture, through material evidence, movable or immovable property that is or is proposed to be part of the category Treasure of the movable national cultural heritage or, as the case may be, of the category of historical monuments in the World Heritage List (OG 43/2000, Article).

Historical monuments are classified as follows (Law 422/2001, Article 8 (1) letters a and b): XY

- in group A - historical monuments of national and universal value;
- in group B - historical monuments representative for the local cultural heritage.

HUNGARY

In Hungary there are two major regulative documents for the protection of cultural heritage as basis:

- Act LXIV. 2001 - Act on the Protection of Cultural Heritage (Act)
- 68/2018 (IV.9) Governmental Decree on Rules for the Protection of Cultural Heritage (Decree)

In the Act the, Ministry Responsible for Cultural Issues (recently Ministry of Human Resources/State Secretariat for Culture), based on the Decree it is the Prime Ministry that exercises the rights concerning cultural heritage through Governmental Offices. Heritage protection activities in Hungary are carried out in a centralized system. Legislation and regulation is a state task, covers the entire country and is enforced locally through the Departments of Construction and Heritage Protection of the County Government Offices.

AUSTRIA

The main legal reference for cultural heritage protection in Austria is the Federal Act on the Protection of Monuments Due to Their Historic, Artistic or Other Cultural Significance or Monument Protection Act. The original version of the act is from 1923 and was object of several changes until the last one in 2020.

The act does not offer any definitions related to archaeological site. According to "the law § 1. (1) the provisions of this Federal Act apply to man-made immovable and movable objects (including remains and traces of creative human intervention and artificially constructed or moulded ground formations) of historic, artistic or other cultural significance ("monuments"), if, due to this significance, their preservation is in the public interest. This significance may be due to the objects per se, but may also arise due to their relationship to, or location in relation to, other objects.

In § 1 (2), **preservation** is defined as being in the public interest if, from a supraregional or, for the time being, only a regional (local) point of view, the monument is a cultural good, the loss of which would amount to an impairment of the stock of Austrian cultural goods as a whole with respect to quality as well as sufficient abundance, diversity and distribution. Furthermore, it is fundamental whether (and to what extent) the preservation of the monument would enable historic documentation.

Without making direct reference to this, the Federal Monument Protection Act states that investigations (including excavations) are carried out by organs of local authorities, including their museums, collections or other scientific institutions and after approval by the Federal Monument Office."

BOSNIA AND HERZEGOVINA

The main act for cultural heritage conservation in Bosnia and Herzegovina is the Zakon o provedbi odluka Komisije/Povjerenstva za zaštitu nacionalnih spomenika uspostavljene prema Aneksu 8. Općeg okvirnog sporazuma za mir u Bosni i Hercegovini from 2002 with several subsequent changes.

The act regulating building activities outside national monuments is the Zakon o odobravanju građenja van granica nacionalnih spomenika odnosno van privremenih granica i provođenju mjera zaštite from 2008.

EU projects -capitalizing the results

The EU projects that were selected partners differ greatly in their objectives and themes and are hard to compare directly but still a possibility to capitalize on the same results. Most of them focus exclusively on archaeological heritage. In the following paragraphs, we will present the projects, their objectives, problems and achieved goals.

The EU project **“Iron Age Danube”** (2017-2019) is the only project to focus on archaeological landscapes²⁸. Its objective was to foster sustainable use of natural and cultural heritage, especially archaeological heritage of the Iron Age period, by communicating a lively image of to the visitors, raising the awareness of the importance of both the visible and hidden archaeological monuments and helping stakeholders and general public to understand the way of living in the past and the needs of the heritage today. The project's special focus was to consider archaeological landscapes as a whole and features that testify to the “monumentalization” of the landscape in the Iron Age period. Project objectives were to protect these archaeological monuments and landscapes as well as to foster their sustainable use for tourism. The main problem which the project tackled, was the protection of archaeological landscapes as a whole, and not specific sites. Besides the scientific studies that were part of the development of new strategies and tools for protecting, presenting, and promoting landscapes, the project also helped develop actual promotional materials, such as a cookbook of Iron age foods, a children’s textbook and different fliers.

Two of the input EU projects concern the Danube Limes, a fortified line that followed the Roman Empire's border along the river Danube from Germany all the way to the delta at the Black Sea. The projects are **“Danube Limes Brand”** and **“Living Danube Limes”**. The first project, **“Danube Limes Brand”** (2012-2014), focused on the Danube Limes as an ideal context through which to promote common identity and cultural heritage values in modern Southeast Europe. The project had the following objectives: long-term and sustainable preservation of Limes monuments through nominating new frontier section for World Heritage status in the Lower Danube countries, development of a joint action strategy for the Danube Limes from the Black Forest to the Black Sea, create brand modules for a Danube Limes destination and interregional cooperation in developing, improving and presenting individual Limes sites. The results were limited to an international conference of all the relevant partners and the promotion of local archaeological sites, which were connected to the Danube Limes.

The second project, **“Living Danube Limes”**, is an ongoing project that will end at the end of 2022. The main objective of the project is the connection of the Danube region through its common Roman heritage. The project seeks to support its preservation by creating consciousness for the value of common heritage while respecting local differences, particularities, and creating awareness. The Roman Danube Limes was not just a border fortification network, but also a vast trading zone with a lot of mobility. Another main objective of the project is laying the foundations for a future European Cultural Route traversing the entire Danube Region. The fostering of sustainable and eco-friendly tourism through tourism strategies specifically created for the Danube Limes region is another prime objective of the project Living Danube Limes. One of the products of the projects is a Roman Danube ship from the 4th century AD that will be reconstructed, using Roman tool replicas, and will cruise

down the entire Danube in 2022, with an international living-history crew on board. After the end of the project, the ship will be at the disposal of each project pilot-site for one year, in order to serve as attraction and motivation for further investment into the partners' pilot-site.

The third project, »**ARCHEODANUBE**« is also an ongoing project that will end as Ister. The project will provide an understanding of archaeological parks as an integrated concept between archaeological heritage/urban development of the city and cultural tourism. All the cities are confronted with the same challenges: how to incorporate and present the archaeological heritage into the contemporary social environment, how to incorporate in the urban parts of the cities, how to integrate preserved remains within buildings and areas of the towns for presentations (example: integration of sustainable mobility), how to provide the sustainable development and how to achieve the economic impact and visibility beyond the local level (cultural tourism). The project paves the way for the preparation of concrete plans, training, tools for preservation and presentation, and concrete small pilots to improve heritage site management's effectiveness in support implementation of new initiatives in tourism (archaeotourism).

National projects- best practice.

In the following paragraphs, we will present the best practice as some national projects.

GERMANY

Archeological park of trooper castell and the LIMES Museum in Aalen

As long as the border of the Roman Empire (LIMES) crossed the northern part of the current territory of Ostwuerttemberg, the town Aalen had been the most important military - and respectively civil - settlement; appr. 1000 Roman soldiers of Ala II Flavia milliaria armee lived in Aalen in 200 A.D. It was abandoned though in appr. 259/260 A.D. as the territory of the province Raetia was conquered by barbarians from the north. First excavations on the territory of the former castell were conducted at the end of 19th century, in 1894 by Mr. Steimle during the 5-week-long expedition. Further excavations followed. After the World War II, in 1950s the town Aalen had intentions to build up living houses on and around the area of the then Roman castell. Those plans were rejected though in the course of resistance that was put up by local historians. The preservation goals had been enforced and the LIMES museum was opened on 5. June 1964. Numerous excavations in the 1970s brought much knowledge and many important findings; the number of museum visitors rose constantly. That is why the first

extension was needed and followed in 1979-81. As the development on the cultural and archeological institution went ahead, additional staff was hired and pedagogical competences were acquired in 1980s. During 1999-2000 the second extension of the LIMES museum was conducted. Over the course of 2000s there were two main development lines on the area of the museum. Firstly, the application for classification as a UNESCO World heritage site was filing; secondly, - partly in connection with first point - the archeological park was remarkably improved, for instance by reconstruction of a trooper shack. After the classification of the Roman Empire's border LIMES as the UNESCO World heritage site in 2005, the establishment of a centralised information point followed in 2008. In 2016 the museum was closed again; the constant exposition of findings had to be completely redesigned and reconceptualised. On 24. May 2019 the re-opening took place, so nowadays the LIMES museum and the surrounding archeological park are the center of cultural, historical and archeological heritage of the Roman Empire in Ostwuerttemberg.

MORE: <https://www.limesmuseum.de/limesmuseum.52501.52497.htm>

LIMES-Dalkinger Gate (as a part of Rainau archeological park)

Among the ancient Roman objects along the Limes, remains of which have survived thus far, the former Limes Gate near Dalkingen is of particular importance. On the outer border of the Roman Empire - probably in connection with a victorious campaign by Emperor Caracalla against the Alemanni - a remarkable, 12-meter-high Roman triumphal arch with a large bronze imperial statue was created in 213 and 214 A.D. It is the only gate system that has been proven by findings along the over 500 km long Upper Germanic-Rhaetian Limes. The remnants of the Dalkinger Gate were uncovered in

1974/75 during excavations and they have severely suffered from the effects of the weather since then. So it was decided in 2008/2009 to build a protection shelter all above the archeological site. The protective structure had to consist of filigree steel materials; a glass cube with a width of 23.10 m, a length of 22.85 m and a height of 7 to 16 m had to be constructed. A light metal construction covered with printed fabric strips within the glass cube, floating freely above the original gate, had to enable the dimensions and appearance of the former Limes gate. Nowadays the Dalkinger Gate is together with a LIMES-border section, a LIMES-tower, a Roman bath, a civil settlement and a castell part of the Rainau archeological park.

The total amount of financial resources spent on the building: 1.87 million euro. Including: LEADER funds of 750,000 euro; the Baden-Württemberg Foundation 630,000 euro; the Monument Foundation 100,000 euro; the State Office for Monument Preservation 108,000 euro. The remaining funds (282.000 euro) are borne by the Ostalb district.

MORE: <https://www.rainau.de/index.php?id=192&L=2>

SLOVENIA

The Stone Walls of the Roman Empire (CLAUSTRA)

In terms of its content, the project The Stone Walls of the Roman Empire (CLAUSTRA) focuses on the Late Roman barrier system claustra Alpium Iuliarum (CAI). CAI was at that time the largest construction and military defence system in the territory of present-day Slovenia and Croatia. A unique common cultural heritage highlights the issues of the evaluation, protection, and conservation of cultural heritage, the knowledge of CAI and the presentation of the system as a whole. Due to the lack of knowledge of the cultural heritage in the local communities, the remains of the CAI are being destroyed by forestry, agriculture, and urbanization. The common identity of the space and the common landscape value are thus disappearing. The project The Stone Walls of the Roman Empire enables joint preventive research and coordination of transnational conservation starting points. The important cultural heritage is now recorded, documented, valorised, registered, protected and will be presented

to the public as a whole. Various works are being carried out as part of the project (a website about CAI with an interactive map, an exhibition, a publication or travel guide around CAI and a documentary) that will present, bring closer and make this important common cultural heritage more accessible to the general public. The promotion of CAI represents a new cultural and tourism potential of the area, which is indispensable for the sustainable development of the region in both countries. Similar monuments in Europe are included in the UNESCO World Heritage List (Hadrian's Wall, the Antonine Wall, the Danubian Limes).

An attempt to reconstruct the Ajdovski zid barrier above Vrhnika

The goals of the project were:

- development of a management plan for the remains of the Roman limestone *Claustra Alpium Iuliarum* in Croatia and Slovenia,
- developing the awareness of the public, target groups (youth, tourism, entrepreneurship, local community) based on the recognition of *Claustra* and its potential on the development possibilities of conservation and sustainable use of this heritage resource for local cohesion and economy and
- developing concrete cooperation between the cultural institutions of both countries by exchanging good practices with the application of advanced remote sensing technologies and non-destructive methods of reconnaissance and by harmonizing conservation views.

As part of the project, they upgraded the *Claustra Alpium Iuliarum* base and made some new discoveries. For example, at the Jelenje location in Croatia, 800 meters of the wall were newly discovered, and at the Novi Pot location in Slovenia, a transitional tower was discovered. The Project group prepared a report comparing legislation and conservation practices of cultural heritage protection in Slovenia and Croatia, a conservation plan, which is the first example of such a document between the two countries, and a management plan.

We would recommend it in implementing this good practice in ISTER project during pilot actions. One of the actions we thought about is educational as well as recreational excursions. As it has been said the main goal of the project is to raise awareness of the public and target groups such as youth,

tourism economy, entrepreneurship and local communities, based on the recognition of Claustra and its potential on development opportunities for conservation and sustainable use of this heritage resource for local cohesion and economy. We think that it is the best way to learn about the project is to experience the results of the project first-hand.

MORE: <https://claustra.org/locations/>

ARCHEST - Developing archaeological audiences along the Roman route Aquileia-Emona-Sirmium-Viminacium

ARCHEST project aimed at capitalising the results of the project T-PAS (Tourist promotion of the archaeological sites along the route Aquileia – Emona – Viminacium) co-financed by the CULTURE Programme 2007-2013 in 2011 and mentioned as good practice connecting culture and tourism during the Infoday on EU funds for tourism held in Brussels in March 2013.

The ARCHEST project promoted the knowledge and use of ICTs applied to Cultural Heritage, sensitized decision- and policy-makers on the importance of ICTs for the enhancement of the cultural heritage, promoted the internationalisation of cultural workers active in archaeology (archaeologists, photographers, 3D designers, graphic designers, scientific popularisers), promoted audience development taking into specific consideration young and disabled people, strengthened the network of archaeological sites connecting Italy to the Black Sea through Slovenia, Croatia, Serbia and Romania, promote the knowledge of the archaeological sites involved, also for tourism purposes.

ROMANIA

Tourist capitalization of the traces of the ancient Apulum, on the route of the Roman emperors

The traces of the Roman camp from Apulum are capitalized on tourism and appear on the "European Cultural Route of the Roman Emperors and of the Wine, along the Danube". Based on the results of archaeological research so far, several objectives from the Roman era have been highlighted in Alba Iulia.

The southern gate of the camp is arranged at the "Route of the three fortifications", which has the conformation of an open-air museum, for the most part. It is one of the places in Alba Iulia where local history, culture and traditions are promoted, being a testimony of the local heritage, which seeks economic development through specific actions that have a minimal impact on the environment. The Via Principalis segment has a similar status.

Sustainable use of the traces of the Principia camp from Apulum brought together a variety of stakeholders (museums, archaeologists, researchers, locals, local, regional and national authorities) who have in common, among others, the desire to protect the connection between man and the environment. In the development of the extensive process of tourist capitalization of Roman objectives were involved: archaeologists, historians, researchers, the National Museum of the Union, Museums from Cluj-Napoca, Ministry of Culture in Romania (consultation for specialized permits), specialists in historical reconstructions, specialists in tourism and the list can go on.

The tourist capitalization of the discovered and researched Roman traces was made with national and European funds, respectively through United Nations programs.

The initiative to bring the Roman cultural heritage of the city of Alba Iulia to the digital world is necessary at a time when cultural tourism has acquired some of the most unexpected dimensions. Through projects such as ISTER, the City Hall appeals to smart technologies, in order to offer the

citizens and the tourists the opportunity to discover some historical realities and, at the same time, in order to recover its own past, with the help of technology.

BOSNIA

Roman Heritage of Sarajevo

The Roman settlement Aquae S (...) is located on the left bank of the River Željeznica, at the initial part of Ilidža's settlement Lužani. During the reign of the Roman Empire, it represented the most significant settlement in the Sarajevo plain. It is assumed that Ilidža was planned in the time of Emperor Marcus Aurelius (161-180 AD). This was the period when a large number of military veterans inhabited this area of Ilidža, thereby increasing its population.

Remnants of thermal spas and urban villas can be seen on the site, but it is hard to imagine what they originally looked like. The Roman Heritage of Sarajevo Project recreates these cultural monuments through Augmented Reality techniques and offers visitors an insight into the life in this area during the Roman Empire.

Remnants of thermal spas and urban villas can be seen on the site, but it is hard to imagine what they originally looked like. The Roman Heritage of Sarajevo Project recreates these cultural monuments through Augmented Reality techniques and offers visitors an insight into the life in this area during the Roman Empire.

AR application guides the users also to the physical location of Roman remains, where they can see the additional digital content - VR video stories about other 3 Roman archaeological sites in the Balkans: Viminacium (Serbia), Municipium S (Montenegro) and Dyrrachium (Albania).

The application aims to present the enriched tourist offer of Sarajevo Canton, but also to be a unique tool for all future visitors of this site, since all those who physically visit the sites in Ilidža will be able to unlock numerous digital content related to the Roman Empire.

FESTIVALS

BOLGARIA

Festival of ancient heritage "EAGLE OF THE DANUBE"

The festival recreates the ancient history of the Bulgarian lands along the Danube - the way of life, culture and military clashes between Imperial Rome and the tribes and peoples inhabiting vast territories (Thracians, Dacians, Goths). Reenactors from Bulgaria, Romania, Italy, Germany, Poland, Moldova, Ukraine and other countries take part in the festival. The program includes scientific conferences and competitions. The festival was organized for the first time in 2008

The festival gathers on one stage over 200 reenactors from different countries who show skills, strength, authentic weapons and clothing. Dances and Roman music are also presented. The cultural programme is accompanied by workshops, especially for young lovers of history. They get involved in ancient crafts, play ancient board games, arrange a mosaic, draw a mythical scene or be made up with the barbaric colors of war.

ROMANIA

Apulum Roman Festival

The Roman Apulum Festival originates from Alba Iulia municipality, having the first ancient reenactment group that organized the first ancient reenactment festival in Romania, inviting several reenactment groups.

The Roman Apulum Festival is a brand of Alba Iulia City Hall. The event is considered the largest historical reenactment festival in Romania. The festival became after a few editions an international event gathering notable historical reenactment groups from other European countries as Italy, Croatia and Bulgaria.

Apulum Roman festival reconstructs elements of civil and military life. It brings in front of the audience ancient equipment and warfare, Roman military drills and manoeuvres, fights between gladiators, lifestyle and handicrafts of the Romans and Dacians, workshops, games, creative activities and slaves markets. Crafting workshops (smithery, skin dressing, pottery, bone carving, target shooting, cooking, hair dressing) alternate with soldier and gladiator trainings, guided tours of the main Roman landmarks and theatre thematic plays. The festival is closed every year with the traditional battle between the Roman legion and the horde of warriors thirsty for revenge. Reenacted in detail, these events offer a genuine outdoor history lesson.

Roman Festival Zalău Porolissum - instrument of promotion of archaeological sites in Zalău Municipality

The Zalău Roman Porolissum Festival was initiated by the Zalău CityHall and the Zalău Local Council in 2005, with the main motivation to offer the general public a cultural event to stand out in the local, regional and national cultural landscape "

On the occasion of the 1910th anniversary of the first great confrontation between the Dacians and the Romans under the auspices of Porolissum Fest, on Sunday, July 24, 2011, in the Porolissum Archaeological Complex, starting at 12 o'clock, in the Amphitheater, continuing in front of the Praetoria Gate, demonstrations and the parade of reenactment troops participating in the event could

be watched (Terra Dacica Aeterna-Cluj, Vulturii din Căлата, Lupii Pustei-Oradea, COHORS III Campestris-Zalău, Lupii Daciei-Zalău).

The event was completed with shopping activities (multiple souvenirs), archery and lance, games for children and adults, food inspired by ancient cuisine, watching historical film. The about 1000 spectators witnessed the attempt to reconstruct the main moments of the first Daco-Roman war, which was attended by over 100 extras from the reenactment troops. The event, organized by the County Museum of History and Art in Zalău, under the auspices and with the wide competition of the County Council, will want one with continuity in the coming years, trying to attract more reenactment troops for an internationalization of this event and more substantial financial support.

The event, organized by the County Museum of History and Art in Zalau, under the auspices and with the wide competition of the County Council, is intended to have continuity in the coming years, trying to attract more reenactment troops for an internationalization of this event and more substantial financial support.

SLOVENIA

PTUJ Roman games- three-day event displaying ancient Roman life

One of the biggest presentations of the Roman period in this part of Europe, which sees Ptuj transformed into Roman Poetovio.

City Ptuj is turned into Roman Poetovio, and under the motto "the year of four Ceasars", the town is occupied by gladiators, legionaries, senators and other worthies. The main event is taking place in the town centre on Saturday, while Sunday's events are intended primarily for families. The festival is organize every year in August.

In mid-August, the streets and squares of the oldest city in the country, Ptuj, were filled with gladiators, legionaries, senators, vestals and other "citizens of Rome". For the eleventh year in a row, the cultural and historical event has been organized by the local society Poetovio LXIX, relocating its participants and spectators 2000 years back, when the current Ptuj (then Poetovio) was a powerful city – first a fort, and later – a major commercial and industrial centre. The city is first mentioned in written sources almost 1950 years ago – around 69 AD.

For several days, the atmosphere of Ancient Rome of the era of Emperor Vespasian (1st century AD) reigned in the city. Over 1000 costumed actors presented the life and customs of Ancient Rome.

Research papers

The research of the Roman roads in Dacia starts first of all from the ancient sources, of which the most important are the *Tabula Peutingeriana*, Ptolemy's *Geography* and the *Ravenna Cosmography*.

Tabula Peutingeriana, an *itinerarium pictum*, is not a map in itself, so it only provides the information needed for a traveler to make a trip in good conditions; in fact, it presents realities from the early times of the province, Trajan-Hadrian, for which reason part of the roads or some of the settlements are not recorded. On this itinerary are marked for the province of Dacia 3 sections of road, *Lederata - Tibiscum; Dierna - Tibiscum - Sarmizegetusa - Apulum - Potaissa - Napoca - Porolissum, Drobeta - Romula - Arutela - Caput Stenarum - Apulum*, measuring a total of 1070km (723 *millia passuum*) and 48 localities (*Tivisco* appears twice).

Ptolemy's *Geography* does not provide very clear data. The work was written at the end of the 2nd century AD, problematic in terms of dating the information it provides, at least for Dacia.³⁴ However, several sections of roads north of the Danube can be reconstructed from here: *Drobeta - Ulpia Traiana Sarmizegetusa - Sarmizegetusa Regia; Taliatae - Dierna - Tibiscum; Viminacium - Zeugma - Arcidava - Aizisis - Tibiscum; Tibiscum - Ulpia Traiana Sarmizegetusa - Hidata - Germisara - Apulum - Marcodava - Salinae - Potaissa - Napoca - Porolissum; Drobeta - Amutrium - Olt*.

The *Cosmography* of the anonymous geographer from Ravenna is a work from the 7th century AD, and the information it provides refers to the 2nd-3rd centuries AD, when the province of Dacia was still part of the empire. The province of Dacia is incorrectly called Moesia, and the localities that appear here are largely the same as those identified in the *Tabula Peutingeriana*, even if in a corrupt form. Regarding the roads, those mentioned by the geographer are: *Porolissum - Apulum - Romula; Apulum - Sarmizegetusa - Acmonia; Drobeta - Ad Mediam - Tibiscum; Tibiscum - Lederata*, together with the settlements between them.

Trajan's column is also an ancient source worth considering when discussing Roman roads, but we must not forget its more or less propagandistic character, so a detached analysis is needed. None of the characteristics of the Column should be exaggerated, not the topography presented, nor its historical value; most likely it presents the events in chronological and geographical order, but certainly very briefly. The column shows the construction of roads as the troops advanced in the territory of

³⁴ Tocilescu 1880; Pârvan 1982; Vulpe 1964, 233-246; Bogdan Cătănicu 1990, 223-234.

Dacia, which provides valuable information, at least related to the Romans' approach to travel routes, which were practically the first constructions made in a new territory.

Medieval documents, often property deeds, but also works by foreign travellers or scholars, recall some "stony roads" or "dry roads", which, in an age when all new roads were earthen, can only indicate to the old Roman roads with stone superstructure, which were still visible and in use.

Among the modern sources it is worth mentioning here the Austrian maps, which have the merit of including road sections that no longer appear on contemporary maps, such as the *Potaissa - Napoca* road section near Gheorgheni, or to provide information on roads that cannot still be seen today or they are no longer easily accessible due to the modification of the land, the deterioration or which are simply no longer used.

According to F. Fodorean, we can identify 5 stages when we discuss the evolution of research on Roman roads in Dacia: during the 16th and 19th centuries appears the first information about road networks, then from the mid-19th century and until the '30s and mid-'30s a series of roads or sections of roads are rediscovered. From now until the middle of the 20th century a series of syntheses began to be written, but with a very general character and only in the '70s did systematic research begin, a great merit having D. Tudor as a pioneer, especially for Oltenia, in southern Dacia. After 1975 and until today, the research has become more systematic and more on point, focusing not only on field research, but also on modern methods of approaching them.³⁵ We mention here that archaeology is often combined with other sciences, and in the case of road research we must mention topography, cartography, geology, geomorphology, aerial photography, LiDAR, resistivity, GPR, seismometry, magnetometry, biology, palynology, all of them necessary when the land is covered by vegetation or affected by agricultural works.

The most important road in Dacia is the one built by Trajan and finished not long after the conquest of Dacia. It starts from *Lederata*, Banatska Palanka on the left bank of the Danube and reaches the northernmost point of the province, *Porolissum*. The first section of this road, *Lederata - Tibiscum*, appears on the *Tabula Peutingeriana* divided into 7 segments, with a total of 23 Roman miles; these segments are: *Lederata - Apus fl(umen)*, *Apus fl(umen) - Arcidava*, *Arcidava - Centum Putei*, *Centum Putei - Berzobis*, *Berzobis - Aizis*, *Aizis - Caput Bubali*, *Caput Bubali - Tibiscum*. This stretch of road also appears in the Ravenna Cosmography, but with corrupt names: *Tiviscum*, *Gubali*, *Zizis* etc. In the modern era this stretch of road is still visible, being described by scholars such as Francesco Grisellini and Luigi Ferdinando Marsigli. Even if not entirely, where it is kept, one can see either the

³⁵ Fodorean 2006, 103.

river stone substructure or, sometimes, even the upper pavement. Due to this situation it could be reconstructed quite easily, both in what concerns the route and the construction technique.³⁶ Also modern sources, the Austrian maps indicate, as well, certain sections of this road, such as the one between the localities of Fârliug (*Aizis*) and Jupa (*Tibiscum*). Due to all these sources, it was possible to detect the fact that the distance of the road is, in fact, 125km, not 107.93km, as it would result from the 23 miles mentioned on the *Tabula Peutingeriana*. Important points on the route are the fort of the *cohors I Vindelicorum* and the *vicus* from Vărădia-Pustă, the fort from *Centum Putei* built by the vexillations of the 4th *Flavia Felix* legion, the *Berzobis* fort (the headquarters of the 4th *Flavia Felix* legion under Trajan), which indicates that this section also functioned as a *limes* road.³⁷

The next section of the imperial road, from west to east, then south to north is that of *Tibiscum - Ulpia Traiana Sarmizegetusa - Apulum*. On the *Tabula Peutingeriana* there are 9 localities between *Tibiscum* and *Apulum*: *Tivisco*, *Agnavie* (Zăvoi), *Ponte Augusti* (Margo), *Sarmategte* (*Sarmizegetusa*), *Ad Aquas* (Călan), *Petris*, *Germizera*, *Blandiana*, *Apula*, the 8 segments totalling 90 Roman miles. The localities of *Tibiscum*, *Ulpia Traiana Sarmizegetusa*, *Hidata* (Călan), *Germisara* and *Apulum* are mentioned by Ptolemy, and the geographer from Ravenna mentions *Burticum* (probably identified east of Valea Cugirului, on the border of Vințul de Jos, at “Lunca Fermei”)³⁸, *Blandiana* (identified as the locality Cârna, Alba county, which was later renamed with its old Roman name)³⁹, *Germigera*, *Petris*, *Aquas*, *Sarmazege*, *Augmonia* and *Augusti*. Valuable information could also be extracted from Austrian maps, where various segments of this road are indicated. From contemporary historiography, the most important contribution belongs to M. Macrea⁴⁰, who identifies the exact route of the road on this section, which turns out to be in fact 150km long, not 133km as indicated by the 90 Roman miles on the *Tabula Peutingeriana*. Among the important points on this section we mention a *statio* at *Pons Augusti*, *Bucova* as an important marble extraction centre, the settlements of *Aquae* (Călan), *Micia* and *Germisara*, as well as the *villa rustica* from Hobița, near *Ulpia Traiana Sarmizegetusa*; on the *Sarmizegetusa - Ostrov* section, the Roman road is still functional and is preserved on a width of 8-8.60m.⁴¹ A milestone pillar was also discovered at *Micia*, erected sometime between 251-253.⁴²

According to the *Tabula Peutingeriana*, from *Apulum* (Alba Iulia) the road then passes through *Brucla* (Aiud) and reaches *Salinae* (Războieni-Cetate), totaling 24 Roman miles, when in reality the distance from Alba Iulia to Războieni is approx. 50km, not 35. Contemporary historians interested in

³⁶ Răuț, Bozu, Petrovszky 1997, 135-159.

⁴² Piso 2011, 315-317.

this stretch of road were, again, M. Macrea⁴³, but also V. Christescu⁴⁴ and E. Panaitescu.⁴⁵ Points worth mentioning on the route are Micești, where a construction with an apse section and a water pipe were discovered, as well as numerous inscriptions, the civil settlement and *mansio* from Șard, the Roman settlement from Ampoița, the stone quarry and the fortlet at Ighiu, as well as the fort of *ala I Batavorum* from Războieni-Cetate.⁴⁶

For the section *Salinae - Potaissa*, the distance recorded by *Tabula*, of 12 *millia passuum*, corresponds to that on the field, of 18km. The Austrian maps were also helpful this time, since one such source mentions the Roman road between the localities of Turda and Călărași, then between Călărași and Războieni-Cetate, indicating exactly the route. The identification on the terrain was possible due to contemporary researchers, starting with Iudita Winkler, who, looking for a Roman bridge over the Arieș, identified a Roman road structure with ceramic fragments and gravel.⁴⁷ The most important point with Roman discoveries on the route, apart from the *Potaissa* fort and town and the Războieni-Cetate fort, is the necropolis of *Potaissa*, identified south of the industrial district of Turda, as well as the Roman rural settlement from Poiana-Izvorul Lișca, near the same municipality, as well as a possible *villa rustica* in Călărași, in the point called “Bogat”.⁴⁸

The next sector, *Potaissa - Napoca*, is also mentioned on the *Tabula Peutingeriana* as measuring a distance of 24 Roman miles, which is not far from the actual distance of 31km. Austrian military maps mention it again between Cluj-Napoca and Aiton. The most important and well-known points on the route are, first of all, *Napoca* and *Potaissa* with all that they include, followed by the milestone from Aiton. Discovered in 1758, the *milliarium* is lost today and preserved only in a drawing rediscovered by Iudita Winkler, so we do not benefit from an accurate and detailed description of it. An essential piece of information that comes to us from its inscription is that in 108 the road between *Napoca* and *Potaissa* was completed⁴⁹; also in Aiton a rural settlement and a *mansio* were discovered.⁵⁰ Other rural settlements were also discovered at Copăceni and Ceanu Mic.⁵¹

The last sector of this imperial road is between *Napoca* and *Porolissum*, the northernmost point of the province. On the *Tabula Peutingeriana*, the settlements from *Optatiana* (Sutoru), *Largiana* (Românași) and *Cersie* (correctly *Certiae*, identified at Romita) are mentioned between the two points.

⁵¹ Fodorean 2006, 120-133.

In the *Cosmography*, a settlement called *Macedonica* appears between *Napoca* and *Optatiana*, probably a mistake. On the Austrian maps as well this stretch of road is very well laid out. Among the contemporary authors who studied the Roman road on this sector we mention V. Christescu⁵², who describes the route of the road between *Apulum* and *Porolissum*, as well as Panaitescu and Macrea, who only briefly mention this route.⁵³ Among the important points on the route we mention the Roman settlement from Suceagu, the *villa rustica* from Viștea (com. Gârbău), a possible Roman settlement in Gârbau (com. Turea), the Roman settlement from Șardu (com. Sânpaul), the Roman settlement at Dragu (Sălaj county), the Sutoru fort (“Gura Căpușului” point, Sălaj county), the Buciumi fort, the Românași fort, the Romita fort, the forts and the settlement from *Porolissum*, as well as the *villa rustica* and the milestone of Mera.⁵⁴ The latter, discovered in 1932, provides valuable and necessary information for the study of the imperial road. It was half destroyed by the plough so that only the left half of the inscription can be seen and read. Based on a completion of this inscription, Daicoviciu dates it to 164-166, under the emperors Lucius Verus and Marcus Aurelius; the lower part of the inscription has been interpreted as a restoration of the road, probably during the time of Caracalla.⁵⁵ A short segment of a road has been recently discovered, between the modern villages of Nădășelu and Șardu, proving that up from this area the Roman road is not parallel with the modern road heading Moigrad (*Porolissum*), but winding up towards north-west.

As can be seen above, the imperial road from *Lederata* to *Porolissum* was the most important road in the province, which has enjoyed special attention since antiquity, when itineraries and works dedicated to aspects of the Roman Empire do not hesitate to mention it, even if sometimes in erroneous forms. This is not surprising, given that the integration of a new province in the empire was dependent on access roads, primarily for the militaries, but also for trade and, ultimately, as a means of communication. As can be seen from the brief presentation related to the sources, the Roman roads are sometimes still visible at the time the Austrian maps were drawn up, i.e. the second half of the 19th century, but only on certain sections, which in some cases are no longer visible today, so their deterioration in the last hundred years is worrying. It should not be understood from here that the imperial road is the only one that has been researched or that deserves to be valorised, but only that this was the main traffic route in the province. Other projects also meant to use modern methods combined with archaeology were those based on aerial photography, initiated primarily by Ioana Oltean⁵⁶ in the late ‘90s and early 2000s and focused on the Mureș Valley area. Another project, based

on the same research method, was initiated by Eötvös Loránd University in Budapest together with the Mureş County Museum in 2009 and resulted in several studies.⁵⁷ The eastern border of Dacia was also researched through aerial photographs, and the results of this research can also be found in a study⁵⁸; equally fruitful were the researches in south-eastern Transylvania.⁵⁹ The BANATerra (or BANATerra) project, carried out between 2006-2010, was meant to be a way to promote the history of Banat, and so 300 archaeological sites were identified.⁶⁰ In this context, the ISTER project is not only useful, but also necessary, aiming not only to valorise the Roman routes in the Danube provinces, but first of all to protect them.

7. Preliminary profile of ISTER partner cities and their Roman roads

SLOVENIA

City: City of Ptuj

The town of Ptuj is located in the north-eastern part of Slovenia in the centre of Lower Drava region. The town belongs to the Podravje region. The municipality occupies the southern part of Slovenske gorice, the north-western part of Ptujsko polje (Ptuj field); the southwestern part stretches on the Dravsko polje (Drava field) on the right bank of Drava River. The total territory of the municipality is 66,6 km², which represents 0,3 % of Slovenia's territory. There are about 23.137 inhabitants in the municipality of Ptuj, which represents 1,13 % of the total Slovenian population. According to the number of inhabitants, Ptuj is one of the smallest municipalities in the country, as it's ranked 9th out of 11 urban municipalities. The town of Ptuj is a regional centre of national importance. It's a hub of activities for social infrastructure, supply, service and other activities. Ptuj is also an important commercial centre and a significant traffic junction. Ptuj can also be described as a regional center, not only due to its geographical location, but also because it can boast with significant cultural and tourist offer. City plans for the future include even better accommodation for tourists, expansion of recreational facilities and cultural offering. Regarding this plans, the city wants to implement a sustainable approach, which will increase alternative transportation choice and limit the car use in more dense urban areas – not only as a legitimate measure, but also in the minds of its inhabitants. Ptuj has the important public functions: a secondary and tertiary levels of health care, higher school education, research organizations, administrative and social functions. Therefore Ptuj is focused on the development of the administrative, economic, educational, cultural, health and transport centre of Lower Drava region.

Name of the roman heritage route/place: [Roman road by hospital](#)

Starting & Ending point of the Routes (only for Routes): *Aquilea – Emona – Celeia - Poetovio – Sirmium – Singidunum.*

Category: *Monument.*

Type of Roman heritage: *Roman road.*

Dating (century/period/date range): *1st - 6th century AD.*

Monument protection status: *Monument of local importance.*

Protective zone: *Monument of local importance.*

Boundaries (perimeter) of immovable cultural assets are determined according to the type and location of the asset, particularly in relation to: *Interaction with its historical setting/ environment.*

Type of Ownership: *Public.*

Short description: *A section of a 6 m wide Roman road presented in situ.*

Vision: *The strategic direction is based on the given and the potential of the destination shows in the connection and intertwining of tourism with culture and the old town within the framework of integral tourist products:*

Treasury of millennia: heritage of ancient Rome and the Middle Ages, festivals, traditions, customs. The vision is to make position Ptuj as an attractive, high-quality, boutique tourist, cultural a lively and heritage-rich city.

City: Ljubljana

Ljubljana is the capital and largest city of the Republic of Slovenia. It is situated in the Ljubljana Basin in Central Slovenia, between the Alps and the Karst. Covering an area of 275 km² it encompasses 1.36 % of Slovenian territory and has 295.505 inhabitants, who make up for 13,7 % of population of Slovenia. Ljubljana is also the country's most important political, administrative, educational, economic and cultural centre as well as the headquarters of all important state institutions. Size-wise Ljubljana classifies as a medium-size European city and have an important geostrategic position, as it is situated on a natural crossroad from Central Europe to the Mediterranean, to the Balkan Peninsula and to the Pannonian Basin. In the past 10 years Ljubljana implemented over 1.800 projects to further increase the quality of life. Ljubljana is also distinguished by its well preserved and easily accessible natural environment, great biodiversity and varied landscape. It is precisely because of the vicinity of the preserved nature and the intertwining of the built and natural environment that the Ljubljana Urban Region is unique among European metropolitan regions. In the future Ljubljana will preserve the character of an agreeable green city, its dimension and convenient living standards will make it a nice place to live in. A rich historical heritage and a significant location manifest in a strong spirit of place and collective memory.

Short description: *Archaeological park Emona unites the remains of Roman town Emona, scattered around the centre of modern Ljubljana. A special trail has been made to connect all the Emonan*

locations in Ljubljana, thus forming an urban Archeological park Emona that takes you back to times when Romans were inhabiting the city from the 1st to the 6th century. Former decumanus and cardo are today's Rimska and Slovenska streets, where a large new presentation in the opposite of the Uršulinke church reveals the findings of the latest excavations on the Congress Square (Kongresni trg). The Roman forum is stressed with the building design of Ferant garden by the architect Edvard Ravnikar, and seen in the floor pavement of Jakopič Gallery. A copy of the Roman statue Emonec stands at the west side of Congress Square. An attentive walker can find Roman spolia built in different buildings, from the Cathedral to the Ljubljana Castle. The finds of Roman insula underground are presented in different pavements such as that in front of the Cankarjev dom Culture and Congress Centre.

Vision: Ljubljana's vision is to offer comprehensive insight into how life was structured in Roman times, after all the city itself builds its identity on respect for its entire history because it is only on this foundation that we can improve development and a direction that guarantees a quality life for our citizens and visitors of all generation. We want to establish appealing presentations and programs about Roman Heritage for educational purposes and for individual exploration as well. The goals are to integrate Roman Routes Network into touristic routes and trails and also to increase inquiry for those types of programs from local and foreign visitors.

ROMANIA

AIM

City: Alba Iulia

Alba Iulia Municipality is a medium sized city, a county capital, located in the heart of the historical region of Transylvania, Romania, known as "the other capital of Romania", a symbolic capital for national unity (unification of Romania was declared here 100 year ago). Alba Iulia municipality owes its historical importance, largely to its geographical position, being located at the crossing or intersection of important roads, which provided the connection with surrounding areas, areas rich in precious metal deposits and other riches of the basement, areas with famous vineyards, etc. Thus, traffic arteries from Transylvania met in the area of Alba Iulia. Also, those traffic arteries communicated with important economic centers, which boosted the demographic, urban and economic development of the area of Alba Iulia. This rich history has left Alba-Iulia with a high range historical heritage, among which the Alba Carolina Citadel stands as the jewel. In 2012, the citadel Alba Carolina was nominated to be "One of the 7 Wonders of Romania". It is also worth mentioning that Alba Iulia is the first city in Romania to be referred to in the World Heritage UNESCO Magazine. Over the last years, the municipality, with the support of the European Union (ERDF), has made large investments (around 70 million euros) for the rehabilitation and valorization of what is nowadays the historical centre of the city, and the motor of local economy. Alba Iulia Municipality is a local public authority which provides a democratic local government of the city of Alba Iulia.

Among its activities and objectives we mention:

- to ensure the provision of public services for the inhabitants of the municipality in a sustainable manner respecting the equality of chances;*
- to promote social and economic development;*
- to promote a safe and healthy environment;*
- to encourage the involvement of citizens and of nongovernmental organizations in the matters of local government;*
- to make sure the citizens of the municipality benefit from good living conditions; In its modern history, Alba Iulia has been a provincial town, enjoying limited economic opportunities. It maintains a range of traditional industries (including a predominant porcelain industry, the largest from Romania, and other activities related to food processing, textile manufacturing or metalworking). Tourism has been the most relevant sector for the local economy. The municipality develops a constant endeavour to enhance the city's touristic potential. In addition to the aforementioned rehabilitation, several events and leisure activities are meant to emphasize the potential of the city's historic and tourism heritage such as: the daily "Changing the Guard" ceremony of the Citadel or the "Treasure of the Citadel" competition. It also has a year-long calendar of events, including music and theaters, a Museum Night, etc.*

Name of the roman heritage route/place: [Roman castrum Apulum](#)

Starting & Ending point of the Routes (only for Routes): *In a brief historical moment, somewhere between the 2nd and the 4th century, the political center of the Roman Empire was not in Rome, but on the Northern-Danube frontier which was maintained by a constant military presence which necessitated the personal, on-the-scene leadership of the Roman emperors at critical moments. The provinces on the borders of the empire became the focal point of imperial administration. The Danube Trail is conceptually rooted in the factors which drew Roman emperors to be physically present and militarily active along the northern frontier of the Empire and encompasses archaeological sites with their individual histories that are monuments to the leadership of the Roman emperors during the period of the Late Empire.*

Category: *Archeological park.*

Type of Roman heritage: *Archeological park.*

Dating (century/period/date range): *2nd century.*

Monument protection status: *Monument of national importance.*

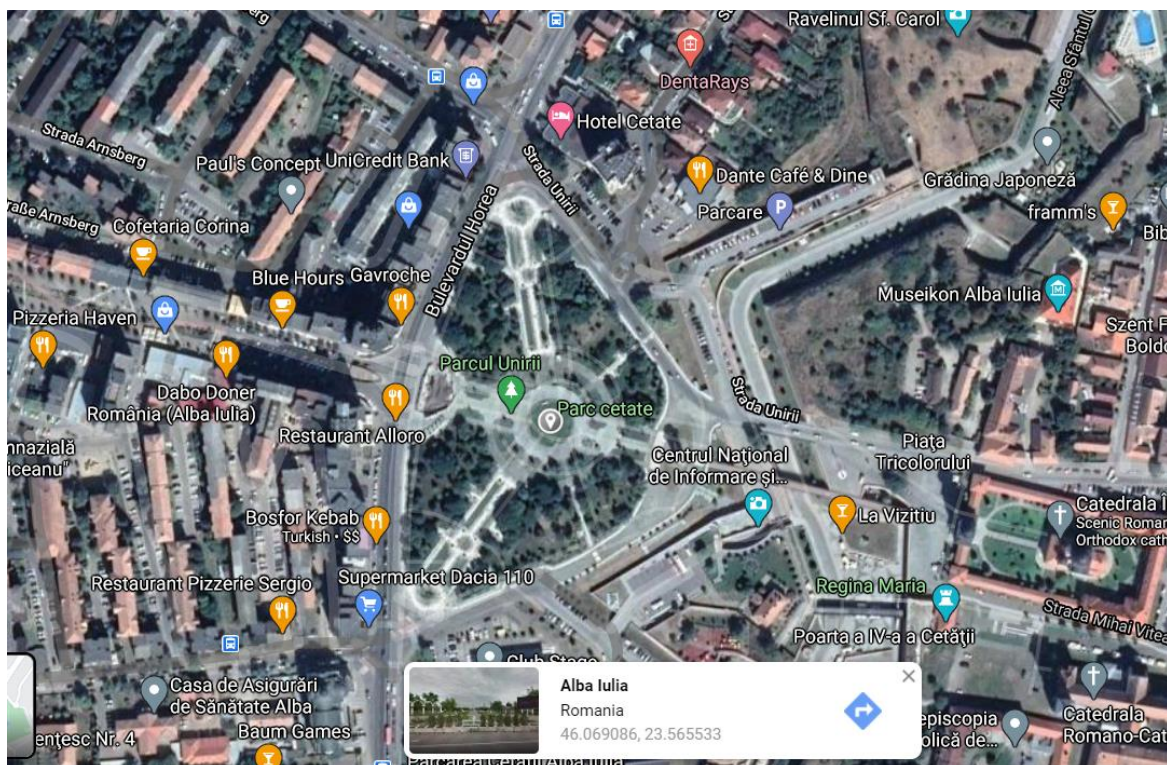

Protective zone: *∟*

Boundaries (perimeter) of immovable cultural assets are determined according to the type and location of the asset, particularly in relation to: *Interaction with its historical setting/ environment*
Type of.

Ownership: *Public.*

Please specify the owners: *Public administrations.*

Location: Address and GPS (N and E): *Romania, Alba Iulia, Unirii Street.*

Physical state/ condition: *Maintained (restored).*

If you have choose maintained (restored), please specifeid: *Restored through replication of original construction with original materials.*

Transformed (other than tourism): *No.*

Transformed for tourism purpose: *Still visible remains from the Apulum castrum can be seen in the form of its former southern gate, called „Porta principalis dextra”. It is the only gate left out of four quadrilateral gates that existed 1800 years ago. The vestiges have only partially preserved its former look and beauty of the past. There are also visible parts of the castrum wall.*

Do you already have a plans the site/sites? *YES - management plan.*

Short description: *The most visible trace of the Apulum Castrum is the gate on the southern side named Porta principalis dextra. It is the only one of the four gates of the rectangular castrum that was preserved until nowadays. The monument, of a great importance for the ancient history of the Romanian space, is highlighted inside the Three Fortifications Tour, arranged in the southern and south-eastern side of the Alba Carolina Citadel. The vestiges present us only a small part of the former aspect of the gate and about a third of its 1880 years elevation. Nevertheless, it is a living testimony of the Roman civilization in this area and is about a flourishing period of the ancient Apulum.*

Vision: *The municipality develops a constant endeavour to enhance the city’s touristic potential. Also, the municipality wants to offer the people who visit it, an unforgettable experience and the desire to return to this place. The initiative to bring the Roman cultural heritage of the city of Alba Iulia to the digital world is necessary at a time when cultural tourism has acquired some of the most unexpected dimensions. Through projects such as ISTER, the City Hall appeals to smart technologies, in order to*

offer the citizens and the tourists the opportunity to discover some historical realities and, at the same time, in order to recover its own past, with the help of technology.

MNIT

Region: The North-West Region of Romania – Northern Transylvania

The North-West Region of Romania – Northern Transylvania, is one of the eight Regions of development in Romania and it is geographically and strategically placed in Europe, effervescently involved in the industries of the future and deeply rooted to its history and nature. The Cluj county is one of the biggest, out of six, in the North-West Region, with a surface of 6,674 square kilometers and a number of 730.878 inhabitants. Its residency, the city of Cluj-Napoca, has an area of 179,5 square kilometers, and 324,960 inhabitants, as of 2019. From the economical point of view, the city activates in several sectors, the main one being IT, especially on outsourcing, being followed by civil engineering and construction, performance and arts, agriculture, tourism, wood and metal industry. (in no particular reason) The city of Cluj-Napoca is renowned for a number of different reasons such as: being centered around the community and planning everything in order for the citizens to benefit from the best services available. At the same time, the city is known for promoting not only local industries but to also invest in the development of diverse fields (from culture to arts, from the transport infrastructure to the health system). Simultaneously, Cluj-Napoca is also recognized for the significant number of students that it accommodates, making it known as the best University Center, in the Northern region of the country.

A honorable mention added to this would be, that in Cluj-Napoca can be found the National Museum of Transylvanian History, one of the most important museums in the country, that dates back to the XIX century. The museum is home to more than few collections, such as : Art and Ethnography; Prehistoric, Clasical and Medieval Archaeology; Romanian History; as well as a Collection that includes pieces and historical elements from the Transylvania Region. The National Museum is involved in the LIMES national program, which is a multianual research and development program, that aims to create a data-base, with all the heritage elements and objects that were a key factor in determining the border of the Roman Empire, in order for them to be added to the UNESCO List of Intangible Cultural Heritage.

Vision:

Through this project we want to bring to attention the lack of interest that we show to the history, our history, which, we believe, should actually be the opposite. Our history, in this case, being determined by the Roman heritage found on our country's area, plays a crucial role in our development as a country and a community and so, it is important to celebrate it, through different methods.

In this case, our vision, is related to the key challenges described above, which represents a starting point for us. We think of them as objectives that we need to reach, sometime in the future, in order for us to be able to do make the most out of what we have :

- 1. We want to mark the road and it's path and protect it (be it by certain means or the law) so that the heritage is perserved in its best form;*
- 2. We want to include the road in all the General Urban Plans of the settlements that it crosses, so that we can know exactly where and how we need to take action (in order for it to not be part of a private property);*
- 3. We want to develop and promote it as a "EcoCultural Corridor" (that will be used only by foot or by bike) by bringing back to life its fame as an "Antique Imperial Road"; starting from Porolissum (Moigrad, Salaj county) until the Danube roots in Germany, and why not, further until it reaches Rome; "For a roman citizen, Porolissum was equal to the end of the world and yet, here begun one of the lenghtiest road that lead to Rome!"*
- 4. We would like for it to become a cultural connection between all the countries in the Danube Region.*

HUNGARY

VMJV

City: Veszprém

Hungarian city Veszprém is a town with county rank in the Central Transdanubia region, the seat of Veszprém County and the Veszprém District. Location: North latitude 47° 05' 34", East Longitude 17° 54' 49". The administrative territory of the city is 126,9 km², the number of inhabitants is around 60 000, slightly declining in the last decade. According to the last census in 2011 5% of the city's resident population declared themselves to belong to a minority. Most of them declared themselves to be German, Gypsy and Russian. Veszprém is also known as the City of queens and is located on the hills and valleys surrounding the Séd stream, at the confluence of three small regions: the Bakony mountain range to the north, the Balaton Uplands to the south and to the east it is bounded by the north-western extension of the plain Mezőföld. This central situation played a significant role in the development of the city and in its socio-economic role and significance throughout history. According to the Veszprem Chamber of Commerce and Trade there are around 6500 enterprises based directly in Veszprém, and around 50 000 more in the county. 73 % of them is interested in services, around 17% in the industry and only 10 % in agriculture concerning the numbers, but the biggest employers of the city are the industrial ones (mostly car/vehicle construction). Veszprém is the educational centre of its region with 12 secondary and numerous primary schools and is also a university town. University of Pannonia offers various qualifications at its Faculty of Business and Economics, Faculty of Engineering, Faculty of Modern Philology and Social Sciences and Faculty of Information Technology. Veszprém also host the College of Theology. Concerning its history in the western part of today's city is Újtelep (new settlement) that is a large-scale Neolithic settlement from the 5th millennium b.c. Concerning the Roman age it is probable that the Romans did not settle in the today city itself, but they built a villa at Gyulafirátót and Kadarta, along the creek Sed (both settlements belong to Veszprém administratively nowadays) and a farm on Baláca called Caesariana. Its very important in all aspects that Veszprem will be the European Capital of Culture in 2023, we believe that we won the title with our regional territorial focus and focus on investing into the people, into the community development beside being attractive to tourist.

PUM

City: Paks

Paks is a small town in Hungary, it lies in the western part of Hungary, in hungarian language called the territory Dunántúl, on the right raised coast, to the north of a river bend of the Danube river. The town has a distance of cca. 100 km to the south from the capital of Hungary, Budapest. The geography of Paks is varied, it is located as a meeting point between two distinct geographic landscapes of middle Hungary, the land is characterised on the one hand by the South-eastern end of the hills called Mezőföld and on the other hand in the fluvial area of the river Danube. Thanks to the characteristics of the landscape, the fields provide good opportunities for agricultural activity. The town has a long history from the Neolithic period, when the first farmers of the territory were settled down here, to the Modern era. It is a remarkable phenomenon that through the ages the morphology of the central place of the settlement altered, and the activity is fluctuated in successive archaeological and historical ages of the town. The roman age is very important in the history of Paks, because of the presence of the roman military, the roman watchtowers and traces of roads. The arrangement of roman auxiliary fort, Lussonium caused changes in the structure of the landscape. There were also civil settlements established in the hinterland of the military frontier line, the ripa (river frontier). The next important period in the history of Paks is the medieaval age, the medieval settlement shows the beginnings of the nowadays central territory of the town, this changed also in the turkish conquest era. The town was resettled in the 18th century with many newcommers of german speaking origin. The 19th century, the

embourgeoisement age was the time of great infrastructural and economic development in the town marked by the growing population. This growing tendency was exhausted in the first half of the 20th century, and Paks become a small peripheric town of Tolna county. The new golden age of time has come with the 1970s, the planning and building of the new atomic powerstation of Hungary which increased the importance of the town. The population has grown, recently Paks has 20.000 inhabitants. The powerstation industry affected a flourishing period of economic life, the picture of the settlement changed. The former civil town (now called old town) extended in southern direction. A new quarter, a new town (atomic town) was erected. Thanks to the atomic powersation and their industrial background, Paks developed continously in the last decades.

Short description: *In the S periphery of Paks, in Csámpa track of the roman limes road was identified. The archaeological site was excavated in 1989, the construction details and cross section verified the existense of the multilayered roman road.*

Vision: *Paks has a real integral settlement development plan confronted with its historical archaeological heritage. The main goal is to increase the touristical potential of Lussonium and his surroundings. The protected Roman heritage zone of the fort as a historic monument can be extended with parts of the civil settlement, the vicus nearby and with the late Roman cemetery. There is a main idea of the touristic development plan of the town: how to involve cultural heritage elements and historic monuments. Roman heritage has now - thanks to the nomination of some sites from Paks along the limes road as component part of the „Frontiers of the Roman empire” world heritage site - great potential. It is also capable of generating touristic interests, increasing the number of visitors. There is a great vision to connect the diverse and fragmented elements of Roman limes infrastructure and to create an archaeological-historcial route, with visible Roman remains and with installations (replicas, information boards) in N-S orientation along the proposed line of the roman military route. There is a good aim to create heritage zones for traces of Roman routes.*

AUSTRIA

APC

City: City of Carnuntum

The Roman City of Carnuntum is situated on the Danube in Lower Austria halfway between Vienna and Bratislava. The area of the ancient city extends over 10km² near the modern villages of Petronell-Carnuntum and Bad Deutsch Altenburg. Most of the accessible remains are located in Petronell-Carnuntum. The Roman city of Carnuntum is part of a huge archaeological landscape and encompasses two amphitheatres, "Heathen's Gate" (a late Roman Monument), a museum and two blocks of excavated Roman houses. These have been rebuilt in their original location and are fully functional. Carnuntum has 130 years experience in research, preservation and conservation of cultural heritage, as well as in the implementation of educational programmes for visitors of all age. Carnuntum's unique selling proposition is the fully functioning Roman city quarter, including original Roman roads, which are partly still paved and are used by our visitors. As regards the wider Roman road network, major roads around the City have been located and are mostly covered by fields. The City of Carnuntum was a major crossing in the Roman road network, as the Limes Road here encounters the so-called Amber Road, which served the wider region as the main entry point into the Roman Empire for trade and cultural exchange, leading from the North Sea/Baltic to the Mediterranean trade networks. The Roman City of Carnuntum has experience in visitor development by promoting multilingualism and improvement of barrier free access infrastructure for all kinds of handicaps as well as in the development of innovative presentation technologies, such as virtual reality applications for smartphones.

GERMANY
RVOW

Region: *The region of Ostwürttemberg (East Wuerttemberg)*

The region of Ostwürttemberg (East Wuerttemberg) is one of the 12 planning units of the German federal state of Baden-Wuerttemberg. It is located in the eastern part of the federal state and includes two administrative districts - Ostalbkreis and Heidenheim. The center of Ostwuerttemberg - the town Aalen (68 000 inhabitants) - is 78 km away from the federal state center Stuttgart. The overall population of 53 towns and municipalities is approximately 450 000. The territory of Ostwuerttemberg (approximately as big as Luxembourg) is structured as follows: 5 % - area under transport infrastructure, 8% - settlements, 40 % - forests, 45 % - agricultural land. As regards economy of Ostwuerttemberg several sectors belong to the core economic competence: automotive industry, machine, facility and tool construction, photonic and optic technology, renewable energy, forest and wood industry. Thanks to the dense logistic network the export quote is about 56%. The very high level of economic development is also indicated by the rate of application for a patent; there are on average 3,54 applications per 100 000 inhabitants (Baden Wuerttemberg 2,34; Germany 1,10).

Vision: As regards visions, development plans, ideas, slogans, etc. in relation to the ancient Roman heritage in Ostwuerttemberg there is a trap briefly indicated above. As for the UNESCO site "Roman LIMES" a special development plan was compiled together by the State Office for Cultural Heritage Baden Wuerttemberg (AP of the ISTER Project), concerned districts and local authorities in 2007. Besides a systematic description of the Roman monument the plan also contains guidelines for dealing with the object in terms of its touristic development, as well as fostering management and protection through landscape design. At the same time there is neither a development plan, nor a working plan, nor any kind of roadmap for the long-term enhancement of other Roman heritage objects in general for the region of Ostwuerttemberg.

BOSNIA AND HERZEGOVINA

RAUSK

City: *The city of Bihac*

The city of Bihac is located in the northwestern part of Bosnia and Herzegovina. According to the latest census, the city of Bihac has a population of 56 269. The geo-traffic position of the City of Bihac is extremely favorable, since the City is located along the main corridors of Western Europe-Mediterranean-Middle East. A number of international and highway routes link the area of the City of

Bihać, connecting this area with the wider environment. The town of Bihać is located directly along the border with the Republic of Croatia, and the realization of a very important road that will run diagonally from Bihać to Sarajevo, which will not connect Western Europe with the Middle East, will have a positive effect on the existing, very favorable geo-traffic position. The relief in the area of the City of Bihać is diverse. It is made up mostly of fields, hills and mid-mountainous land. The average altitude is 2247 meters, the greater part of the territory of the City is located on terrains up to 600m.nv, while its smaller part is located in the lanes and hills with an altitude of over 900 meters. Natural beauties and the National Park "Una" represent quality bases for the development of tourism and the tourist economy. Una National Park is situated in the northwestern part of Bosnia and Herzegovina, mainly in the area of City of Bihać. The Park encompasses valley of the river Una, the canyon of the river Unac, right tributary of Una all the way to the river Krka in the west and the orographic slopes of the mountains Pljesevica, Grmeč and Osječenica. This area represents a unique natural complex in this part of Europe, valuable for the preservation of the overall landscape and biological diversity. Mineral raw materials and non-metals of which there are deposits of gypsum, dolomite, limestone, architectural and construction stone of bihacite in the area of the City of Bihać. This makes the area of the City, by its geological structure, a promising and significant base for the exploration and exploitation of mineral resources. In the area of Bihać is located abundance of cultural - historical monuments, most notably Captain's Tower, Mosque Fethija, Church of St. Anthony of Padua, Mausoleum, building roads Landscape, Museum of the First Session of AVNOJ, Monastery Rmanj and others. In the area of Bihać, there are several medieval towns such as: Sokolac tower, Orasac, Havalala and Ostrovica in Kulen Vakuf.

Short description: *In the location called Veliki Stijenjani (nearby Kulen Vakuf) in Bihać is a Roman road covered by soil that should be excavated. There are small signs from the Roman times along that road, which indicates that cobblestone road is underneath the layer of soil. Since this area was ruled by Romans , this investment is needed to enrich database on Roman heritage, which is not that big yet and which will show our diverse historical and cultural heritage in Bosnia and Herzegovina . It would also attract more visitors and tourists interested in history to come and visit Una-Sana Canton.*

Vision: *The transnational investment in all the intervention areas will consist of placing roman inspired milestones along the Ancient Roman road, aimed at increasing the visibility of the remaining Roman routes heritage (especially in the unexcavated areas) and to contribute to the transnational branding for the entire Danube Region , as the roman milestones will be recurrent elements along the route. The investment will be under the ownership of the project partner, as funded under the ISTER project, located on the property of the Museum of differently owned property. Each investment site will have a clear signage showing the investment funding, as well as the name of the owner. After transnational investment is done it will become a part of the network of Roman routes and settlements across Danube Region. That will attract visitors and tourists interested in history to come and visit Una-Sana Canton and we hope that e the number of people visiting the Roman heritage and learning about it will increase and in that way provide durability of results.*

BOLGARIA

BEF

City: Town of Vidin, Bolgaria

The organization of the road system of Southeast Europe in ancient times was done by the Romans. It was the roads that glorified Rome and remained the longest used facilities even after the decline of the empire. They not only contributed to the development of trade, but also accelerated the cultural and technological exchange between the peoples living within the empire. One of the most important roads, passing through Bulgaria, is the Low Danubian Road. The Roman road was built during the reign of Emperor Trajan in the 1st century on the right side of the Lower Danube (the Bulgarian side) along the Danube Limes. It connected stations, castles and fortresses to the Danube Delta. Roman military camps (castles), small garrisons and observation towers were built on both sides of the Danube. In addition, civilian settlements are being built, mostly for veterans and former legionnaires. The road passes through Vidin Region, 27 km from the town of Vidin and 2 km from Archar village. Vidin is a port town on the southern bank of the Danube in north-western Bulgaria. It is close to the borders with Romania and Serbia, and is also the administrative centre of Vidin Region. Vidin emerged at the place of an old Celtic settlement known as Dunonia. The settlement evolved into a Roman fortified town called Bononia. The town grew into one of the important centres of the province of Upper Moesia, encompassing the territory of modern north-western Bulgaria and eastern Serbia. The historical museum is one of the oldest scientific and cultural institutions in Vidin. It is an important socially significant center for finding, keeping and processing historical heritage. The beginning of the museum work in Vidin dated from 1910 when the Archeological association was founded. The place of the Vidin museum in national museum network is approved by its success in creating new exhibitions and

achievements in scientific researches. The museum has a well built structure which corresponds with its historical profile. It contains an administration building, “Konaka” museum, “Baba Vida” fortress, Epigraphic center, ethnographic museum – “Krastata Kazarma” and an art gallery.

Short description: *Bononia is the largest centers of Roman Empire along the Lower Danube limes. This Roman military and civil center lies today under the modern town of Vidin, Bulgaria. The city is fortified with the most powerful defensive system on the Danube bank. The walls are thick 4 meters and towers are decangular. Data are available for nine of the towers. Old archaeological excavations provide data for the earliest period of the history of Bononia as a military camp during the Principate. In Late Antiquity Bononia develops further. The town was the seat of another cavalry auxiliary unit: Cuneus equitum Dalmatarum Fortensium, according to Notitia Dignitatum. New archeological excavations (2014-2020) have uncovered part of the western fortress wall and the western gate from which Decumanus Maximus begins.*

Do you already have a plans the site/sites? *YES-management plan.*

Short description: The fortress guarded the important Roman road connecting Bononia (the present-day town of Vidin) and Singidunum (the present-day city of Belgrade). The original stronghold consisted of a quadriburgum with four towers round in plan protruding from the walls. Since one of the towers, the southeastern one, is preserved to a height of 16 m, it is possible to restore the masonry of the fortress. It was made from crushed stones and 3 lines of bricks (opus mixtum). The soldier's barracks, the dormitories, armories and stables were situated inside the fortress. This was the planning of the fortress in the second half of the 3rd century. It was used as a seat of an auxiliary military troop ala quingenaria, i. e. a cohort comprising 500 soldiers. In a later period an enlargement abutted the northern wall which considerably enlarged the protected area. It was elongated irregular quadrangular in plan. Its eastern wall made a curve before it was connected to the quadriburgum. The enlargement had towers which foundations were round in plan and the superstructure was octagonal in plan. Probably in the IV century the castelle developed as a civil settlement with an independent bishop.

Short description: Already in the 1st century parts of the Legio IV Flavia and Legio VII Claudia camped here. After the Dacian War (101/2 – 105/6) the Roman armies have been relocated here from the North, and the city was promoted to a colony by Emperor Trajan (98 – 117). In 272 Ratiaria became capital of the newly established province of Dacia Ripensis. There was once again a strong military presence in Ratiaria. The city was constructed following the grid street plan. Parts of the western fortification wall and its towers, as well as the western gate, have been discovered. The fortification wall is 3,85 m wide. On both sides of the gate there were heptagonal towers. Except for few reconstructions, it remained unchanged in the following couple of centuries. The last reconstructions date to the time of Emperor Anastasius (941 – 518). The districts of Ratiaria expanded far beyond the fortified area. Many rich residential buildings with floor mosaics and artisan's workshops have been recorded in the city's surroundings. Unfortunately, due to many years of looting, most of the site has been destroyed.

Type of Ownership: *Public.*

Please specify the owners: *Municipality of Bregovo.*

Location: 3 km West from the port the village Vruv. Latitude 44 11 56.7600 Longitude 22 42 23.7600.

Physical state/ condition: Abandoned (natural reclamation).

If you have choose maintained (restored), please specifeid: /

Transformed (other than tourism): *No.*

Transformed for tourism purpose: *No.*

Do you already have a plans the site/sites? *No.*

Short description: The most early written sources is Geographia and Intinerarum Antonini Augusti. The Castellum has a rectangular shape. The length is 140-160 m, a width - 50-60 m. Remains of two shafts and a ditch have been excavated. The castellum arises of the remains of old Tracian village and was in use across Roman and Early Bizantine ages.

8. ISTER partner cities and their other Roman heritage-add as a annexes 1 to the Baseline study.

9. Conclusions and the focus of project ISTER and other deliverables

The ISTER project's overall objective is to rediscover and revive the ancient **network of roads and settlements developed by the Romans**, along with the Danube Region and design eco-cultural routes out of it

The project firstly addresses the challenge of **Roman heritage discontinuity**, which reflects both in a territorial dimension related to a low level of investment and connection between heritage resources and local/ regional productive sectors, as well as in visualisation and attractiveness dimensions regarding the promotion and awareness-raising on the importance of heritage resources as drivers for regional development (economic development).

Roman heritage sites face many challenges today in the era of accelerating globalization like uncontrolled urban development (urban sprawl) due to demographic growth of the cities as well as environmental problems like fluctuation of river courses leading to frequent floods. The roman sites are located outside or inside the localities, some Roman fortifications being today 90% covered by the construction of the modern city, by constructing new roads or affected by intensive agricultural works and deforestations. However, there are also sites without traces of late interventions, restored or under restoration, or pastures. Through urbanization, people tend to ignore their history and traditions seeking adequate services and a better lifestyle leading to the disappearance of existing urban fabric that creates an undefined urban pattern

A particular component of the cultural heritage, the **Cultural Routes (CR)**, represents 'irreplaceable narrative keys' that create synergies between people and natural and cultural heritage assets. Cultural routes are also enriching the contributions of peoples to future generations by representing a proof of core values such as solidarity, sharing, tolerance, multicultural integration and peace

Stepping further the isolated/ detached Roman settlements heritage, ISTER tackles the territorial dimension of the **Roman Routes**, as a contiguous transnational element that passes DR states' borders and provides a relevant scale for exchange and joint development.

Key challenges which will be tackled in the project base on the baseline research:

1. Low level of visibility and territorial integration of heritage assets into the local/regional development;
2. Valorising Roman unexplored Heritage and making it more visible and accessible to the public;
3. Low level of awareness and visibility of the Roman Routes, on a local and national level;
4. Investments being made but no noticeable improvement of the area was seen, being it economical or as an impact on tourism;
5. Disagreement between the archaeologist and other specialists, based on the interventions that were made on the ruins.

Therefore, ISTER's main objective focuses on rediscovering and revitalizing the ancient Roman Roads Network along the DR as a key driver in promoting territorial development based on sustainable use of cultural and natural heritage (specifically, Roman routes). **ISTER promotes this Roman roads and settlements network as a catalyst for touristic development, as well as an opportunity for territorial competitiveness and sustainable growth of Danube crossed-regions**
