

CLUJ-NAPOCA

Flagship event in the Iris District (c) City of Cluj-Napoca

The Iris District

Located, directly by the Someșul Mic river, Iris faces opportunities as well as challenges due to changing local demographics. Because of its location, it's become an attractive district for newcomers in the city. Yet the district also faces challenges when it comes to providing spaces for different activities. The regeneration of the population risks the creation of a segregated community, with the quality of urban spaces varying within the district.

The role of AGORA became central in activating the neighbourhood to find means to participate in transforming public spaces in the district to fit the needs of the locals. The AGORA project set out to build the foundation for the creation of a multi-functional community and youth centre, with the main goal of creating spaces that all residents will be able to use. The transformation of the Karl Liebknecht Square as the pilot project included the transformation of a space facing the square into a multi-functional public facility.
